UNIT 4 · STANDARD 6.AT.4

Relate Fractions, Decimals, and Percentages

Lesson 4-2 · Teacher Copy

Name: Type your name **Date:** Today's date **Class:** Class period

My Notes
Level 3 Enrichment

🎯 **TODAY'S OBJECTIVES**

Content Objective: I can write equivalent fractions, decimals, and percents for the same value.

Language Objective: I can explain my conversions using the words percent, decimal, equivalent, and benchmark.

📖 See **Learn It** for the explanation and worked examples, and the **Vocab** tab for the words. These are your notes to fill in and keep.

✏️ **Fill in each blank as we go. Use the Word Bank to help you.**

📚 **WORD BANK — FILL EACH BLANK WITH THE BEST WORD**

Fractions, Decimals, and Percents | **Percent** | **Decimal** | **Equivalent** | **Benchmark** | **Discount**

👆 *Tap any word to see what it means and a picture.*

Level 3: try the blanks from memory first, then check the bank.

1. Three equivalent ways to name the same part of a whole are ________, ________ and ________.

2. A ratio that compares a number to 100, written with a % sign, is a ________.

3. A number that uses a point to show parts of a whole is a ________.

4. Having the same value but written a different way is being ________.

5. A common, easy-to-remember value like 50% or 1/4 used for comparing is a ______________.

6. An amount taken off a price, often given as a percent, is a ______________.

Write About the Math **Guided ESOL writing**

Use the support level you need. Every level answers the same math question.

1. Understand the Question

EXPLAIN

Who is correct, and how much would the game cost on sale?

Your job: Answer the question. Use math evidence. Explain how the evidence proves your answer.

Responde la pregunta. Usa evidencia matemática. Explica cómo la evidencia demuestra tu respuesta.

2. Plan Your Math Words

Check at least two words you will use.

- [ ] **Fractions, Decimals, and Percents** — Three equivalent ways to name the same part of a whole.
  Fracciones, decimales y porcentajes — Tres maneras equivalentes de nombrar la misma parte de un todo.

- [ ] **Percent** — A way to compare a number to 100, shown with the % sign.
  Porcentaje — Una manera de comparar un número con 100, con el signo %.

- [ ] **Decimal** — A number with a dot, like 0.5, that shows a part less than one.
  Decimal — Un número con un punto, como 0.5, que muestra una parte menor que uno.

- [ ] **Equivalent** — Having the same value, just written a different way.
  Equivalente — Tener el mismo valor, escrito de otra forma.

- [ ] **Benchmark** — A familiar number you use to guess, like 50% or 1/2.
  Referencia — Un número conocido que usas para estimar, como 50% o 1/2.

Say it first: Say your idea to a partner or quietly to yourself before you write.
Di tu idea a un compañero o en voz baja antes de escribir.

The friend who said ____% is correct because 3/5 = ____ = ____%. The sale price is $____.

Di tu respuesta primero: Mi respuesta es ____ porque ____.

3. Build Your Explanation

Model the parts: This model shows the parts of an explanation. It does not answer your writing question.

Claim: 3/4, 0.75, and 75% all name the same score.

Evidence: Students give 3/4 = 0.75 = 75% and recognize these are three forms of one value, not three different scores.

Reasoning: This evidence connects the definition of percent to the mathematical claim.

Start

Most language support

Complete the frames. Use the word bank.

Completa las oraciones. Usa el banco de palabras.

- **The friend who said ____% is correct because 3/5 = ____ = ____%. The sale price is $____.**
- **My answer is ____.**
  Mi respuesta es ____.

Build

Some language support

Write two connected sentences. Use because, so, or but.

Escribe dos oraciones conectadas. Usa porque, entonces o pero.

- **My claim is ____.**
  Mi afirmación es ____.
- **I know because ____.**
  Lo sé porque ____.
- **So ____.**
  Entonces ____.

Explain

Light language support

Write a claim, give math evidence, and explain your reasoning.

Escribe una afirmación, da evidencia matemática y explica tu razonamiento.

- **My claim is ____.**
  Mi afirmación es ____.
- **My math evidence is ____.**
  Mi evidencia matemática es ____.
- **This proves ____ because ____.**
  Esto demuestra ____ porque ____.

4. Check Your Explanation

- [ ] I answered the question.
  Respondí la pregunta.
- [ ] I used math evidence: numbers, an equation, a model, or a comparison.
  Usé evidencia matemática: números, una ecuación, un modelo o una comparación.
- [ ] I explained how the evidence proves my answer.
  Expliqué cómo la evidencia demuestra mi respuesta.
- [ ] I used at least two math words.
  Usé por lo menos dos palabras matemáticas.
- [ ] I reread complete sentences and punctuation.
  Volví a leer mis oraciones completas y la puntuación.

Writing Guide — Teacher Copy

The support level changes the amount of language scaffolding, not the mathematical expectation. Look for the same five features in every response.

- I answered the question.
- I used math evidence: numbers, an equation, a model, or a comparison.
- I explained how the evidence proves my answer.
- I used at least two math words.
- I reread complete sentences and punctuation.

Answer Key & Teacher Guide

1. **Notes 1:** Fractions, Decimals, and Percents
2. **Notes 2:** Percent
3. **Notes 3:** Decimal
4. **Notes 4:** Equivalent
5. **Notes 5:** Benchmark
6. **Notes 6:** Discount
7. **Watch for this mistake:** *A common mistake in Relate Fractions, Decimals, and Percents is treating the numerator and denominator as the percent's digits — turning 3/5 into "35%" by just reading the 3 and the 5. Percent means out of 100, so the fix is to build an equivalent fraction with denominator 100: 5 × 20 = 100, so multiply the top by 20 too — 3/5 = 60/100 = 60%. A second version of this mistake is scaling only ONE part of the fraction (writing 3/5 = 3/100 or 60/5). Whatever you multiply the denominator by, you must multiply the numerator by the same number. When a denominator will not reach 100 evenly (8, 3, 7), divide the numerator by the denominator instead and then multiply by 100.*
8. **Try It 1:** A. 25% and 1/4 — *Move the decimal two places: 0.25 = 25%. As a fraction, 0.25 = 25/100 = 1/4.*
9. **Try It 2:** A. 0.6 and 60% — *5 × 20 = 100 and 3 × 20 = 60, so 3/5 = 60/100 = 0.6 = 60%.*
