UNIT 3 · STANDARD 6.AT.2

Solve Problems with Unit Rates

Lesson 3-8 · Teacher Copy

Name: Type your name **Date:** Today's date **Class:** Class period

My Notes

Level 3 Enrichment

🎯 **TODAY'S OBJECTIVES**

Content Objective: I can solve real-world problems by using unit rates to compare options.
Language Objective: I can explain my comparison using the words unit rate, better buy, per unit, and rate.

📖 See **Learn It** for the explanation and worked examples, and the **Vocab** tab for the words. These are your notes to fill in and keep.

✏️ **Fill in each blank as we go. Use the Word Bank to help you.**

📚 **WORD BANK — FILL EACH BLANK WITH THE BEST WORD**

Unit Rate Problem Solving | Unit Rate | Better Buy | Comparison | Per Unit | Rate | Proportion

👆 *Tap any word to see what it means and a picture.*

Level 3: try the blanks from memory first, then check the bank.

1. Find the amount per __________ unit, then use it to compare the choices.

2. A rate that gives the amount for exactly one unit is a __________.

3. The option that costs less per item, found by comparing unit rates, is the __________.

4. Showing how two amounts relate to each other is a __________.

5 The cost or amount for a single item is the cost __________.

6 A ratio comparing two quantities with different units is a __________.

7 An equation stating that two ratios are equal is a __________.

Write About the Math

Which printer should the manager choose, and how long will it take to print all 600 tickets?
¿Qué impresora debe escoger el gerente, y cuánto tiempo tomará imprimir los 600 boletos?

Say your answer to a partner first. Then write it, using at least two of these words:

- ☐ **Unit Rate Problem Solving** — *Resolución de problemas con tasas unitarias*
- ☐ **Unit Rate** — *Tasa unitaria*
- ☐ **Better Buy** — *Mejor compra*
- ☐ **Comparison** — *Comparación*
- ☐ **Per Unit** — *Por unidad*

Model: *Finding the cost per one token lets me compare deals fairly even when the package sizes differ.* — Students explain the packages have different quantities, so the per-unit cost (unit rate) is needed to compare deals fairly.

Start

Complete the frames. Use the word bank.
Completa las oraciones. Usa el banco de palabras.

- **Printer A prints ____ tickets per minute. Printer B prints ____ tickets per minute. The manager should use Printer ____ because it is faster. It will take ____ minutes to print 600 tickets.**
- **My answer is ____ because ____.**
  Mi respuesta es ____ porque ____.

Build

Write two connected sentences. Use because, so, or but.
Escribe dos oraciones conectadas. Usa porque, entonces o pero.

- **My claim is ____.**
  Mi afirmación es ____.

- **My evidence is ____, so ____.**
  Mi evidencia es ____, entonces ____.

Explain

Write a claim, give math evidence, and explain your reasoning.

Escribe una afirmación, da evidencia matemática y explica tu razonamiento.

- [ ] I answered the question.
- [ ] I used math evidence: numbers, an equation, or a model.
- [ ] I used at least two math words.

Writing Guide — Teacher Copy

- The answer to the math question is correct.
- The evidence is real lesson mathematics (numbers, equation, or model), not restated claim.
- The support level changed the language scaffolding, never the mathematical expectation.

Answer Key & Teacher Guide

1. **Notes 1:** Unit Rate Problem Solving
2. **Notes 2:** Unit Rate
3. **Notes 3:** Better Buy
4. **Notes 4:** Comparison
5. **Notes 5:** Per Unit
6. **Notes 6:** Rate
7. **Notes 7:** Proportion
8. **Watch for this mistake:** *A common mistake in Solve Problems with Unit Rates is comparing the total prices instead of the cost per item — the deal with the smaller total can still cost more per unit. Always reduce each option to its unit rate before you decide, then pick the lower one.*
9. **Try It 1:** A. 50 miles per hour — *150 ÷ 3 = 50 miles per hour.*
10. **Try It 2:** A. 15 tickets for $3.00 — $0.20 each — *8 for $2.00: $2.00 ÷ 8 = $0.25 each. 15 for $3.00: $3.00 ÷ 15 = $0.20 each. $0.20 < $0.25, so 15 for $3.00 is cheaper per ticket.*
