🎯 **TODAY'S OBJECTIVES**

Content Objective: I can plot ordered pairs in all four quadrants of the coordinate plane.

Language Objective: I can explain my work using the words quadrant, negative coordinate, reflection, and axis.

📖 See **Learn It** for the explanation and worked examples, and the **Vocab** tab for the words. These are your notes to fill in and keep.

✏️ **Fill in each blank as we go. Use the Word Bank to help you.**

1. One of the four regions of the coordinate plane, numbered I to IV, is a ________.

2. A coordinate less than zero, which places a point left of or below the origin, is a ________.

3. A flip of a point over an axis is a ________.

4. One of the two number lines, the x-axis or y-axis, that form the grid is an ________.

5. A whole number or its opposite is an ________.

Reflect — Exit Ticket

A point has a negative x-coordinate and a negative y-coordinate. Which quadrant is it in?

A. Quadrant I

B. Quadrant II

C. Quadrant III

D. Quadrant IV

Answer Key & Teacher Guide

1. **Notes 1:** Quadrant
2. **Notes 2:** Negative coordinate
3. **Notes 3:** Reflection
4. **Notes 4:** Axis
5. **Notes 5:** Integer
6. **Watch for this mistake:** *A common mistake in Ordered Pairs in All Four Quadrants is skipping the key idea: "The signs of (x, y) tell you the quadrant: (+,+) is I, (-,+) is II, (-,-) is III, (+,-) is IV." — always check your work against this rule before you submit.*
7. **Try It 1:** C. Quadrant III — *A negative x means left and a negative y means down, so (-5, -2) is in Quadrant III, where both coordinates are negative.*
8. **Try It 2:** B. (-, +) — *Quadrant II is up and to the left of the origin, so x is negative and y is positive: (-, +).*
9. **Exit Ticket:** C. Quadrant III — *Quadrant III is where both x and y are negative. This means the point is left of the origin and below the origin.*
