UNIT 3 · STANDARD 6.AT.3A

Determine Equivalent Ratios Using Tables

Lesson 3-3 · Teacher Copy

Name: Type your name **Date:** Today's date **Class:** Class period

My Notes
Level 3 Enrichment

🎯 **TODAY'S OBJECTIVES**

Content Objective: I can use a ratio table to find equivalent ratios.
Language Objective: I can explain my table using the words ratio table, equivalent ratio, scale factor, and pattern.

📖 See **Learn It** for the explanation and worked examples, and the **Vocab** tab for the words. These are your notes to fill in and keep.

✏️ **Fill in each blank as we go. Use the Word Bank to help you.**

📚 **WORD BANK — FILL EACH BLANK WITH THE BEST WORD**

Ratio Tables | Ratio table | Equivalent ratio | Scale factor | Pattern | Additive pattern

👆 *Tap any word to see what it means and a picture.*

Level 3: try the blanks from memory first, then check the bank.

1. A table whose every row holds the same comparison is a ______ ______.

2. A table that lists equivalent ratios in rows or columns is a ______.

3. Two ratios that make the same comparison are ______ ______.

4. The number you multiply a ratio by to get an equivalent ratio is the ______.

5. A rule that the numbers in a table follow is a ______.

6 A pattern where you add the same amount each step is an ______________.

Write About the Math **Guided ESOL writing**

Use the support level you need. Every level answers the same math question.

1. Understand the Question

EXPLAIN

A juice bar makes a Berry Blast smoothie with 3 scoops of frozen berries for every 2 cups of yogurt. A customer orders enough for a party of 20 people, and each person gets one serving. The juice bar needs to use a ratio table to figure out how many scoops and cups to prepare?

Your job: Answer the question. Use math evidence. Explain how the evidence proves your answer.

Responde la pregunta. Usa evidencia matemática. Explica cómo la evidencia demuestra tu respuesta.

2. Plan Your Math Words

Check at least two words you will use.

- [ ] **Ratio Tables** — Tables that organize pairs of equivalent ratios.
  Tablas de razones — Tablas que organizan pares de razones equivalentes.
- [ ] **Ratio table** — A table of equal ratios that shows a pattern.
  Tabla de razones — Una tabla de razones iguales que muestra un patrón.
- [ ] **Equivalent ratio** — Two ratios that mean the same thing, like 1:2 and 2:4.
  Razón equivalente — Dos razones que significan lo mismo, como 1:2 y 2:4.
- [ ] **Scale factor** — The number you multiply both parts of a ratio by to get an equal ratio.
  Factor de escala — El número por el que multiplicas ambas partes de una razón para obtener una razón igual.
- [ ] **Pattern** — A rule that numbers follow again and again.
  Patrón — Una regla que los números siguen una y otra vez.

Say it first: Say your idea to a partner or quietly to yourself before you write.
Di tu idea a un compañero o en voz baja antes de escribir.

The recipe uses 3 scoops of berries for every ____ cups of yogurt, so 20 servings need ____ scoops of berries and ____ cups of yogurt.
Di tu respuesta primero: Mi respuesta es ____ porque ____.

3. Build Your Explanation

Model the parts: This model shows the parts of an explanation. It does not answer your writing question.

Claim: When the recipe gets 4 times bigger, both the mix and the milk get 4 times bigger.

Evidence: A strong answer says BOTH quantities are multiplied by the same number (4), so 2:3 becomes 8:12, keeping the ratio equivalent.

Reasoning: This evidence connects the definition of equivalent ratio to the mathematical claim.

Start

Most language support

Complete the frames. Use the word bank.

Completa las oraciones. Usa el banco de palabras.

- **The recipe uses 3 scoops of berries for every ____ cups of yogurt, so 20 servings need ____ scoops of berries and ____ cups of yogurt.**
- **My answer is ____.**
  Mi respuesta es ____.

Build

Some language support

Write two connected sentences. Use because, so, or but.

Escribe dos oraciones conectadas. Usa porque, entonces o pero.

- **My claim is ____.**
  Mi afirmación es ____.
- **I know because ____.**
  Lo sé porque ____.
- **So ____.**
  Entonces ____.

Explain

Light language support

Write a claim, give math evidence, and explain your reasoning.

Escribe una afirmación, da evidencia matemática y explica tu razonamiento.

- **My claim is ____.**
  Mi afirmación es ____.
- **My math evidence is ____.**
  Mi evidencia matemática es ____.
- **This proves ____ because ____.**
  Esto demuestra ____ porque ____.

4. Check Your Explanation

- [ ] I answered the question.
  Respondí la pregunta.
- [ ] I used math evidence: numbers, an equation, a model, or a comparison.
  Usé evidencia matemática: números, una ecuación, un modelo o una comparación.
- [ ] I explained how the evidence proves my answer.
  Expliqué cómo la evidencia demuestra mi respuesta.
- [ ] I used at least two math words.
  Usé por lo menos dos palabras matemáticas.
- [ ] I reread complete sentences and punctuation.
  Volví a leer mis oraciones completas y la puntuación.

Writing Guide — Teacher Copy

The support level changes the amount of language scaffolding, not the mathematical expectation. Look for the same five features in every response.

- I answered the question.
- I used math evidence: numbers, an equation, a model, or a comparison.
- I explained how the evidence proves my answer.
- I used at least two math words.
- I reread complete sentences and punctuation.

Answer Key & Teacher Guide

1. **Notes 1:** Ratio Tables
2. **Notes 2:** Ratio table
3. **Notes 3:** Equivalent ratio
4. **Notes 4:** Scale factor
5. **Notes 5:** Pattern
6. **Notes 6:** Additive pattern
7. **Watch for this mistake:** *A common mistake in Ratio Tables is scaling only ONE part of the ratio, or adding the scale factor to a part instead of multiplying by it — for example, turning 2:3 into 6:3 (multiplying only the first number by 3 and forgetting the second) or into 4:5 (adding the scale factor 2 to the second number instead of multiplying, since 3+2=5 but 3×2=6). Before you submit, multiply BOTH numbers by the same scale factor and check that your new ratio simplifies back to the original.*
8. **Try It 1:** A. $15 — *6 tacos is 3 times 2 tacos, so multiply the cost by 3: $5 x 3 = $15.*
9. **Try It 2:** A. 12 — *The scale factor is 9 div 3 = 3. Multiply the mango by 3: 4 x 3 = 12 cups.*
