UNIT 6 · STANDARD 6.AT.6A

Write Algebraic Expressions

Lesson 6-3 · Teacher Copy

Name: Type your name **Date:** Today's date **Class:** Class period

My Notes

Level 2 Standard

🎯 **TODAY'S OBJECTIVES**

Content Objective: I can write algebraic expressions from words and real-world situations.

Language Objective: I can explain my expression using the words variable, coefficient, constant, and algebraic expression.

📖 See **Learn It** for the explanation and worked examples, and the **Vocab** tab for the words. These are your notes to fill in and keep.

✏️ **Fill in each blank as we go. Use the Word Bank to help you.**

📚 **WORD BANK — FILL EACH BLANK WITH THE BEST WORD**

Variable | Algebraic Expression | Coefficient | Constant | Like terms

👆 *Tap any word to see what it means and a picture.*

1. A letter that stands for an unknown number is a ______________.

2. A math phrase with variables, numbers, and operations but no equal sign is an ______________.

3. The number multiplied by a variable, like the 7 in 7n, is the ______________.

4. A term that is just a number and never changes, like the 5 in 3x + 5, is a ______________.

5. Terms with the same variable part are ______________.

Write About the Math

Guided ESOL writing

Use the support level you need. Every level answers the same math question.

1. Understand the Question

COMPARE

How do you turn words into an expression? Why does '12 less than a number g' become g – 12 and not 12 – g?

Your job: Answer the question. Use math evidence. Explain how the evidence proves your answer.

Responde la pregunta. Usa evidencia matemática. Explica cómo la evidencia demuestra tu respuesta.

2. Plan Your Math Words

Check at least two words you will use.

- ☐ **Variable** — A letter that stands for a number that is unknown or can change.
  Variable — Una letra que representa un número desconocido o que puede cambiar.
- ☐ **Algebraic Expression** — A math phrase that has at least one letter.
  Expresión algebraica — Una frase matemática que tiene al menos una letra.
- ☐ **Coefficient** — The number in front of a letter, like the 3 in 3x.
  Coeficiente — El número frente a una letra, como el 3 en 3x.
- ☐ **Constant** — A number on its own that does not change.
  Constante — Un número solo que no cambia.
- ☐ **Like terms** — Terms with the same letter, like 2x and 5x.
  Términos semejantes — Términos con la misma letra, como 2x y 5x.

Say it first: Say your idea to a partner or quietly to yourself before you write.

Di tu idea a un compañero o en voz baja antes de escribir.

The words '____' mean ____, so the expression is ____.

Las palabras '____' significan ____, así la expresión es ____.

3. Build Your Explanation

Model the parts: This model shows the parts of an explanation. It does not answer your writing question.

Claim: Write 12t + 50: the 12t grows with tickets, the 50 stays fixed.

Evidence: Students write 12t + 50, identify t as the variable number of tickets, 12 as the coefficient (price per ticket), and 50 as the constant venue fee that does not change.

Reasoning: This evidence connects the definition of algebraic expression to the mathematical claim.

Start

Most language support

Complete the frames. Use the word bank.

Completa las oraciones. Usa el banco de palabras.

- **The words '____' mean ____, so the expression is ____.**
  Las palabras '____' significan ____, así la expresión es ____.
- **It is g − 12, not 12 − g, because 'less than' means ____.**
  Es g − 12, no 12 − g, porque 'menos que' significa ____.

Build

Some language support

Write two connected sentences. Use because, so, or but.

Escribe dos oraciones conectadas. Usa porque, entonces o pero.

- **My claim is ____.**
  Mi afirmación es ____.
- **I know because ____.**
  Lo sé porque ____.
- **So ____.**
  Entonces ____.

Explain

Light language support

Write a claim, give math evidence, and explain your reasoning.

Escribe una afirmación, da evidencia matemática y explica tu razonamiento.

- **My claim is ____.**
  Mi afirmación es ____.
- **My math evidence is ____.**
  Mi evidencia matemática es ____.
- **This proves ____ because ____.**
  Esto demuestra ____ porque ____.

4. Check Your Explanation

- [ ] I answered the question.
  Respondí la pregunta.
- [ ] I used math evidence: numbers, an equation, a model, or a comparison.
  Usé evidencia matemática: números, una ecuación, un modelo o una comparación.
- [ ] I explained how the evidence proves my answer.
  Expliqué cómo la evidencia demuestra mi respuesta.
- [ ] I used at least two math words.
  Usé por lo menos dos palabras matemáticas.
- [ ] I reread complete sentences and punctuation.
  Volví a leer mis oraciones completas y la puntuación.

Writing Guide — Teacher Copy

The support level changes the amount of language scaffolding, not the mathematical expectation. Look for the same five features in every response.

- I answered the question.
- I used math evidence: numbers, an equation, a model, or a comparison.
- I explained how the evidence proves my answer.
- I used at least two math words.
- I reread complete sentences and punctuation.

Answer Key & Teacher Guide

1. **Notes 1:** Variable
2. **Notes 2:** Algebraic Expression
3. **Notes 3:** Coefficient
4. **Notes 4:** Constant
5. **Notes 5:** Like terms
6. **Watch for this mistake:** *A common mistake in Write Algebraic Expressions is treating 'each' or 'per' as if it means add instead of multiply, and attaching the variable to the wrong number. For 'a $25 setup fee plus $8 per hour, h,' students often write 25 + 8 + h (adding all three numbers) or 25h + 8 (multiplying the flat fee by h) instead of the correct 8h + 25. Since $8 applies per hour, it must multiply the variable (8h), and the flat $25 fee is a constant added only once — check that the per-unit rate, not the flat fee, is the number multiplied by the variable.*
7. **Try It 1:** A. x − 5 — *'Less than' subtracts from the number: start with x and take away 5, so x − 5.*
8. **Try It 2:** A. 2s — *'Twice' means two times the number, so twice s is 2s.*
