

MSTAR PRACTICE WORKSHEET

Lesson 6-10: Divide Mixed Numbers

Grade 6 Mathematics · Standard 6.NOS.1

These are MSTAR-style questions written for this curriculum to rehearse the format. They are not official Maryland assessment items. MSTAR — Maryland's new state test, first given in spring 2027 — uses the same kinds of questions you see here: selected response, select-all, two-part evidence questions, and written responses.

Part A — Skills Check

One point each.

Question 1 SELECTED RESPONSE — CORRECT: B

What is $1\frac{1}{2} \div \frac{3}{4}$?

- ☐ A $1\frac{1}{8}$
- ☒ B 2
- ☐ C $\frac{3}{4}$
- ☐ D $\frac{9}{8}$

$1\frac{1}{2} = \frac{3}{2}$. Then $\frac{3}{2} \div \frac{3}{4} = \frac{3}{2} \times \frac{4}{3} = \frac{12}{6} = 2$.

Question 2 SELECTED RESPONSE — CORRECT: C

Convert $3\frac{2}{5}$ to an improper fraction.

- ☐ A $\frac{6}{5}$
- ☐ B $\frac{15}{5}$
- ☒ C $\frac{17}{5}$
- ☐ D $\frac{32}{5}$

$3 \times 5 = 15$, then $15 + 2 = 17$. So $3\frac{2}{5} = \frac{17}{5}$.

Question 3 SELECTED RESPONSE — CORRECT: C

What is $2\frac{1}{4} \div \frac{3}{4}$?

- ☐ A $1\frac{1}{2}$
- ☐ B $2\frac{1}{3}$
- ☒ C 3
- ☐ D $\frac{9}{16}$

$2\frac{1}{4} = \frac{9}{4}$. Then $\frac{9}{4} \div \frac{3}{4} = \frac{9}{4} \times \frac{4}{3} = \frac{36}{12} = 3$.

Question 4 SELECTED RESPONSE — CORRECT: D

What is $3\frac{1}{2} \div \frac{1}{4}$?

- ☐ A $3\frac{1}{8}$
- ☐ B $\frac{7}{8}$
- ☐ C $\frac{13}{4}$
- ☒ D 14

$3\frac{1}{2} = \frac{7}{2}$. Then $\frac{7}{2} \div \frac{1}{4} = \frac{7}{2} \times \frac{4}{1} = \frac{28}{2} = 14$.

Question 5 SELECTED RESPONSE — CORRECT: C

A baker has $2\frac{1}{4}$ cups of butter. Each batch of cookies needs $\frac{3}{4}$ cup of butter. How many batches can the baker make?

- ☐ A $1\frac{1}{2}$ batches
- ☐ B 2 batches
- ☒ C 3 batches
- ☐ D 6 batches

Convert $2\frac{1}{4} = \frac{9}{4}$. Then $2\frac{1}{4} \div \frac{3}{4} = \frac{9}{4} \times \frac{4}{3} = \frac{36}{12} = 3$ batches.

Question 6

SELECTED RESPONSE — CORRECT: B

Mission 1: The stakeout shift is $4\frac{1}{2}$ hours long. Each agent covers a $1\frac{1}{2}$ -hour watch. How many agent watches fill one shift?

(A) $2\frac{1}{2}$

(B) 3

(C) $4\frac{1}{2}$

(D) 6

$4\frac{1}{2} = \frac{9}{2}$ and $1\frac{1}{2} = \frac{3}{2}$. So $\frac{9}{2} \div \frac{3}{2} = \frac{9}{2} \times \frac{2}{3} = \frac{18}{6} = 3$ watches.

Part B — Test-Format Questions

Scoring notes and distractor rationales below each item.

Question 7**TWO-PART QUESTION****Part A — correct answer: B**

What is the value of $3\frac{3}{4} \div 1\frac{1}{2}$?

- ☐ A $1\frac{1}{2}$
- ☒ B $2\frac{1}{2}$
- ☐ C 2
- ☐ D $5\frac{5}{8}$

Convert both mixed numbers to improper fractions: $3\frac{3}{4} = \frac{15}{4}$ and $1\frac{1}{2} = \frac{3}{2}$. Then keep, change, flip: $\frac{15}{4} \times \frac{2}{3} = \frac{30}{12} = \frac{5}{2} = 2\frac{1}{2}$.

- **A:** That is the divisor itself, not the quotient. Keep $\frac{15}{4}$, change to multiply, flip $\frac{3}{2}$ to $\frac{2}{3}$.
- **C:** The whole numbers were divided and the fractions dropped. Convert to $\frac{15}{4}$ and $\frac{3}{2}$ first.
- **D:** That multiplies without flipping. Change the divisor $\frac{3}{2}$ to $\frac{2}{3}$ before multiplying.

Part B — correct answer: C

Which reasoning shows why your answer to Part A is correct?

- ☐ A Convert $3\frac{3}{4}$ by multiplying 3×4 and keeping the denominator, giving $\frac{12}{4}$, then $\frac{12}{4} \times \frac{2}{3} = 2$.
- ☐ B Ignore the whole numbers and divide only the fraction parts: $\frac{3}{4} \div \frac{1}{2} = \frac{3}{4} \times \frac{2}{1} = \frac{6}{4} = 1\frac{1}{2}$.
- ☒ C Convert to improper fractions, $\frac{15}{4}$ and $\frac{3}{2}$, then keep, change, flip: $\frac{15}{4} \times \frac{2}{3} = \frac{30}{12} = \frac{5}{2} = 2\frac{1}{2}$.
- ☐ D Convert to improper fractions and multiply straight across without flipping: $\frac{15}{4} \times \frac{3}{2} = \frac{45}{8} = 5\frac{5}{8}$.

Converting $3\frac{3}{4}$ requires $3 \times 4 + 3 = 15$ in the numerator, giving $\frac{15}{4}$. After keep, change, flip the product is $\frac{30}{12}$, which simplifies to $2\frac{1}{2}$.

Question 8

WRITTEN RESPONSE · 2 POINTS

Type II Reasoning: Skipping the Conversion

Tyrone divided $2\frac{1}{2} \div \frac{1}{4}$. His work was: keep $2\frac{1}{2}$, change $\div$ to $\times$, flip $\frac{1}{4}$ to $\frac{4}{1}$. Then he multiplied only the whole number, $2 \times 4 = 8$, and carried the $\frac{1}{2}$ along, so he answered $8\frac{1}{2}$.

Explain Tyrone's misconception and give the correct quotient.

Model answer: Tyrone never converted the mixed number, so the $\frac{1}{2}$ was never multiplied by 4. Convert first: $2\frac{1}{2} = \frac{5}{2}$. Then keep, change, flip: $\frac{5}{2} \times \frac{4}{1} = \frac{20}{2} = 10$. The quotient is 10.

2 points	Student explains that $2\frac{1}{2}$ must be converted to the improper fraction $\frac{5}{2}$ before multiplying so that the half is included, and gives the quotient 10.
1 point	Student gives the quotient 10 but does not explain the missing conversion to an improper fraction.
0 points	Student agrees with Tyrone that the quotient is $8\frac{1}{2}$ or gives an unrelated response.

Part C — Show Your Thinking

Model answer and scoring guidance.

Question 9

WRITTEN RESPONSE · 2 POINTS

A detective has a rope that is $5\frac{1}{4}$ feet long. She needs to cut it into pieces that are each $\frac{3}{4}$ foot for tying evidence tags. How many pieces can she cut? Write the equation, show each step (convert, keep-change-flip, multiply, simplify), and verify your answer.

Model answer: The equation is $5\frac{1}{4} \div \frac{3}{4}$, so convert $5\frac{1}{4} = \frac{(5 \times 4 + 1)}{4} = \frac{21}{4}$, then Keep-Change-Flip: $\frac{21}{4} \times \frac{4}{3} = \frac{84}{12} = 7$ pieces. Multiplying back checks it: $7 \times \frac{3}{4} = \frac{21}{4} = 5\frac{1}{4}$ feet of rope.

Award 2 points for a complete explanation with correct mathematics, 1 point for a correct answer with thin reasoning, 0 for an unrelated response.

Answer Key. Score written responses with the rubric and guidance above; award partial credit per the 1-point rows.
