

MSTAR PRACTICE WORKSHEET

Lesson 6-2: Division Expressions with Fractions and Mixed Numbers

Grade 6 Mathematics · Standard 6.NOS.1

These are MSTAR-style questions written for this curriculum to rehearse the format. They are not official Maryland assessment items. MSTAR — Maryland's new state test, first given in spring 2027 — uses the same kinds of questions you see here: selected response, select-all, two-part evidence questions, and written responses.

Part A — Skills Check

One point each.

Question 1 SELECTED RESPONSE — CORRECT: CWhat is the reciprocal of $\frac{3}{5}$?

- ☐ A $\frac{1}{3}$
- ☐ B $\frac{3}{5}$
- ☒ C $\frac{5}{3}$
- ☐ D $\frac{5}{5}$

To find the reciprocal, flip the fraction. The reciprocal of $\frac{3}{5}$ is $\frac{5}{3}$.

Question 2 SELECTED RESPONSE — CORRECT: CWhat is $\frac{1}{2} \div \frac{1}{4}$?

- ☐ A $\frac{1}{8}$
- ☐ B $\frac{1}{2}$
- ☒ C 2
- ☐ D 4

$\frac{1}{2} \div \frac{1}{4} = \frac{1}{2} \times \frac{4}{1} = \frac{4}{2} = 2$. Two $\frac{1}{4}$ -size pieces fit into $\frac{1}{2}$.

Question 3 SELECTED RESPONSE — CORRECT: B

What is $\frac{3}{4} \div \frac{1}{8}$?

- ☐ A $\frac{3}{32}$
- ☒ B 6
- ☐ C $\frac{8}{3}$
- ☐ D 24

$\frac{3}{4} \div \frac{1}{8} = \frac{3}{4} \times \frac{8}{1} = \frac{24}{4} = 6$. Six $\frac{1}{8}$ -size pieces fit into $\frac{3}{4}$.

Question 4 SELECTED RESPONSE — CORRECT: A

What is the first step in evaluating $2\frac{1}{2} \div \frac{1}{4}$?

- ☒ A Rewrite $2\frac{1}{2}$ as the improper fraction $\frac{5}{2}$
- ☐ B Flip $2\frac{1}{2}$ to $\frac{1}{2}2$
- ☐ C Divide 2 by $\frac{1}{4}$ and ignore the half
- ☐ D Add $2 + \frac{1}{2} + \frac{1}{4}$

A mixed number cannot be flipped or multiplied as it stands, so rewrite it first: $2\frac{1}{2} = \frac{5}{2}$. Then Keep, Change, Flip gives $\frac{5}{2} \times \frac{4}{1} = 10$.

Question 5 SELECTED RESPONSE — CORRECT: B

What is $\frac{2}{3} \div \frac{1}{3}$?

- ☐ A $\frac{1}{2}$
- ☒ B 2
- ☐ C $\frac{2}{9}$
- ☐ D 6

$\frac{2}{3} \div \frac{1}{3} = \frac{2}{3} \times \frac{3}{1} = \frac{6}{3} = 2$. Two $\frac{1}{3}$ -size pieces fit into $\frac{2}{3}$.

Question 6

SELECTED RESPONSE — CORRECT: C

A recipe needs $\frac{2}{3}$ cup of sugar. You only have a $\frac{1}{6}$ -cup scoop. How many scoops do you need?

- ☐ A 2 scoops
- ☐ B 3 scoops
- ☒ C 4 scoops
- ☐ D 6 scoops

$$\frac{2}{3} \div \frac{1}{6} = \frac{2}{3} \times \frac{6}{1} = \frac{12}{3} = 4 \text{ scoops.}$$

Part B — Test-Format Questions

Scoring notes and distractor rationales below each item.

Question 7

TWO-PART QUESTION

Part A — correct answer: C

What is the value of $2\frac{1}{4} \div \frac{3}{8}$?

- ☐ A $\frac{1}{6}$
- ☐ B $2\frac{2}{3}$
- ☒ C 6
- ☐ D $\frac{27}{32}$

Rewrite $2\frac{1}{4}$ as the improper fraction $\frac{9}{4}$. Keep $\frac{9}{4}$, change $\div$ to $\times$, flip $\frac{3}{8}$ to $\frac{8}{3}$: $\frac{9}{4} \times \frac{8}{3} = \frac{72}{12} = 6$.

- **A:** That is the reciprocal of the answer. Keep $\frac{9}{4}$ on top: $\frac{9}{4}$ times $\frac{8}{3}$.
- **B:** The wrong fraction was flipped. Keep $\frac{9}{4}$ as it is and flip only the divisor, $\frac{3}{8}$, to $\frac{8}{3}$.
- **D:** That multiplies without flipping. Change $\frac{3}{8}$ to $\frac{8}{3}$ before multiplying.

Part B — correct answer: B

Which reasoning shows why your answer to Part A is correct?

- ☐ A Divide only the fraction parts, $\frac{1}{4} \div \frac{3}{8} = \frac{2}{3}$, then put the whole number 2 back in front to get $2\frac{2}{3}$.
- ☒ B Change $2\frac{1}{4}$ to $\frac{9}{4}$. Keep $\frac{9}{4}$, change $\div$ to $\times$, flip $\frac{3}{8}$ to $\frac{8}{3}$: $\frac{9}{4} \times \frac{8}{3} = \frac{72}{12} = 6$.
- ☐ C Change $2\frac{1}{4}$ to $\frac{9}{4}$, then multiply straight across without flipping: $\frac{9}{4} \times \frac{3}{8} = \frac{27}{32}$.
- ☐ D Change $2\frac{1}{4}$ to $\frac{9}{4}$, then flip the first fraction instead of the second: $\frac{4}{9} \times \frac{3}{8} = \frac{1}{6}$.

A mixed number has to become an improper fraction before keep, change, flip, and only the divisor gets flipped. That gives $\frac{9}{4} \times \frac{8}{3} = \frac{72}{12} = 6$.

Question 8

WRITTEN RESPONSE · 2 POINTS

Type II Reasoning: Flipping the Wrong Fraction

Marisol divided $5/6 \div 2/3$. Her work was: $6/5 \times 2/3 = 12/15 = 4/5$. She wrote that the quotient is $4/5$.

Explain Marisol's misconception and give the correct quotient.

Model answer: Marisol flipped the dividend instead of the divisor. Keep the first fraction as it is, change $\div$ to $\times$, and flip only the second fraction: $5/6 \times 3/2 = 15/12 = 5/4 = 1\ 1/4$.

2 points	Student explains that keep, change, flip flips only the divisor, not the dividend, so $5/6$ stays as it is and $2/3$ becomes $3/2$, and gives the quotient $5/4$ or $1\ 1/4$.
1 point	Student gives the quotient $5/4$ or $1\ 1/4$ but does not explain that only the second fraction is flipped.
0 points	Student agrees with Marisol that the quotient is $4/5$ or gives an unrelated response.

Part C — Show Your Thinking

Model answer and scoring guidance.

Question 9

WRITTEN RESPONSE · 2 POINTS

Is $3/4 \div 1/2$ the same as $1/2 \div 3/4$? Solve both and explain why or why not. What does this tell you about the order in division?

Model answer: $3/4 \div 1/2$ becomes $3/4 \times 2/1 = 6/4 = 1\ 1/2$, while $1/2 \div 3/4$ becomes $1/2 \times 4/3 = 4/6 = 2/3$, so the two expressions are not equal. Swapping the dividend and the divisor flips the quotient to its reciprocal, which shows that division is not commutative — order matters.

Award 2 points for a complete explanation with correct mathematics, 1 point for a correct answer with thin reasoning, 0 for an unrelated response.

Answer Key. Score written responses with the rubric and guidance above; award partial credit per the 1-point rows.
