

Decimal Division Road Trip

Unit 1: Number System Launch • Lesson 1-7 • EduWonderLab

UNIT 1 • LESSON 1-7 • TEACHER NOTES

Standard 6.NS.3

FORMAT Checkpoint trail game	TIME 25–30 min
GROUPING Pairs	TOPIC Divide Decimals
STANDARD 6.NS.3	PREP LEVEL Light — print road-trip map and checkpoint cards

Learning goal *I can divide decimals by making the divisor a whole number first.*

Teacher setup

- Print one map and checkpoint set per pair. Each checkpoint is a decimal division.
- At every checkpoint, students make the divisor a whole number, then divide.
- One “fix the setup” card lets partners critique a wrong move.

Materials

Road-trip map, Checkpoint cards, Decimal-movement arrows, Pencil.

Differentiation & language support

- Decimal-movement arrows show how the point shifts in both numbers (SPED).
- Sentence stem: “I moved the decimal ____ place(s) in both numbers, so the divisor became ____.”
- ESOL: connect to real trip words — miles, gallons, snacks.

Key vocabulary (English / Español):

Term	Español	What it means
divisor	divisor	the number you divide by
dividend	dividendo	the number being divided
equivalent	equivalente	equal in value

Quick teacher check: *Look at the setup step on Card 9 ($6.3 \div 0.07$) — both numbers shift two places.*

Decimal Division Road Trip

Unit 1: Number System Launch • Lesson 1-7 • EduWonderLab

Name: _____

Date: _____

Class: _____

Your goal: *I can divide decimals by making the divisor a whole number first.*

What you need

Road-trip map, Checkpoint cards.

How to play

1. Start at the first checkpoint. Rewrite the problem so the divisor is a whole number.
2. Move the decimal the same number of places in the dividend.
3. Divide and write the quotient at the checkpoint.
4. Check that your answer is reasonable, then drive to the next checkpoint.

Checkpoint Cards

At each checkpoint, make the divisor a whole number by moving the decimal the same way in both numbers, then divide.

1. $45.6 \div 6$	2. $12.5 \div 0.5$
3. $9.6 \div 0.8$	4. $33.6 \div 1.2$
5. $7.25 \div 5$	6. $14.4 \div 0.6$
7. $51.2 \div 0.4$	8. $18.9 \div 0.9$
9. $6.3 \div 0.07$	10. $22.5 \div 1.5$

Checkpoint log (show the whole-number divisor setup):

Explain your thinking

Explain why moving the decimal the same way in both numbers keeps the answer the same.

Sentence frame: *Moving the decimal in both numbers makes an ___ problem that is easier to divide.*

★ **Challenge:** *Card 9 needed two decimal moves. Write a new problem that also needs two moves and solve it.*

ANSWER KEY

Teacher copy — please do not distribute to students.

UNIT 1 • LESSON 1-7 • Decimal Division Road Trip

Standard 6.NS.3

Answers

1. $45.6 \div 6$ Answer: 7.6	2. $12.5 \div 0.5$ Answer: 25
3. $9.6 \div 0.8$ Answer: 12	4. $33.6 \div 1.2$ Answer: 28
5. $7.25 \div 5$ Answer: 1.45	6. $14.4 \div 0.6$ Answer: 24
7. $51.2 \div 0.4$ Answer: 128	8. $18.9 \div 0.9$ Answer: 21
9. $6.3 \div 0.07$ Answer: 90	10. $22.5 \div 1.5$ Answer: 15

Teaching notes & look-fors

- Card 9: $6.3 \div 0.07 \rightarrow 630 \div 7 = 90$.
- Moving the decimal the same direction in both numbers gives an equivalent quotient.
