

Coordinate Recipe Plot

Unit 3: Culinary Academy · Lesson 3-3 · EduWonderLab

UNIT 3 · LESSON 3-3 · TEACHER NOTES

Standard 6.RP.3a

FORMAT Plot and interpret

TIME 25–30 min

GROUPING Pairs

TOPIC Graph Ratio Tables

STANDARD 6.RP.3a

PREP LEVEL Light — print coordinate grids with labeled axes

Learning goal *I can plot ratio pairs on a coordinate grid and explain what each point means.*

Teacher setup

- Print grids with axes already labeled to support ESOL learners.
- Students complete each ratio table, plot the ordered pairs, and connect them.
- For each card, students describe what a point means in the recipe.

Materials

Coordinate grids (axes labeled), Ratio tables, Ruler, Pencil.

Differentiation & language support

- Pre-labeled axes reduce reading load (ESOL/SPED).
- Sentence stem: “The point (__, __) means __.”
- Remind students that the line passes through the origin (0, 0).

Key vocabulary (English / Español):

Term	Español	What it means
ordered pair	par ordenado	two numbers that locate a point (x, y)
origin	origen	the point (0, 0)

Quick teacher check: *Have a pair explain the meaning of the point in Card 2.*

Coordinate Recipe Plot

Unit 3: Culinary Academy · Lesson 3-3 · EduWonderLab

Name: _____ Date: _____ Class: _____

Your goal: *I can plot ratio pairs on a coordinate grid and explain what each point means.*

What you need

Coordinate grid, Ratio-table cards, Ruler.

How to play

1. Read the ratio on the card.
2. Find the ordered pair the card asks for.
3. Plot the point on your grid and connect points with a ruler.
4. Write what the point means in the recipe.

Plot Cards

Use the ratio to find ordered pairs, plot them, and explain what each point means.

1. Ratio 1 lemon : 3 cups water. Ordered pair for 4 lemons?	2. Same ratio. What does the point (2, 6) mean?
3. Ratio 2 cups flour : 1 egg. Ordered pair for 6 cups flour?	4. Ratio 3 : 5. Ordered pair when $x = 6$?
5. Ratio 1 : 4. Ordered pair when $x = 5$?	6. Ratio 2 : 5. What does the point (4, 10) mean?
7. Ratio 4 : 1. Ordered pair when $x = 8$?	8. For any ratio, name the point where the line starts.

Record your work (ordered pairs + meaning):

Explain your thinking

Explain why all the points for one ratio line up in a straight line through the origin.

Sentence frame: *The point (____, ____) means ____ compared to ____.*

★ **Challenge:** *Plot the points for ratio 1 : 2 and ratio 1 : 3 on the same grid. Which line is steeper, and why?*

ANSWER KEY

Teacher copy — please do not distribute to students.

UNIT 3 • LESSON 3-3 • Coordinate Recipe Plot

Standard 6.RP.3a

Answers

1. Ratio 1 lemon : 3 cups water. Ordered pair for 4 lemons? Answer: (4, 12)	2. Same ratio. What does the point (2, 6) mean? Answer: 2 lemons need 6 cups of water
3. Ratio 2 cups flour : 1 egg. Ordered pair for 6 cups flour? Answer: (6, 3)	4. Ratio 3 : 5. Ordered pair when $x = 6$? Answer: (6, 10)
5. Ratio 1 : 4. Ordered pair when $x = 5$? Answer: (5, 20)	6. Ratio 2 : 5. What does the point (4, 10) mean? Answer: 4 units to 10 units (the ratio doubled)
7. Ratio 4 : 1. Ordered pair when $x = 8$? Answer: (8, 2)	8. For any ratio, name the point where the line starts. Answer: (0, 0), the origin

Teaching notes & look-fors

- All equivalent-ratio points are collinear and pass through (0, 0).
- A larger second value makes a steeper line (Card 8 challenge).
