

Fraction Division Model Match

Unit 2: Fraction Detective Agency • Lesson 2-1 • EduWonderLab

UNIT 2 • LESSON 2-1 • TEACHER NOTES

Standard 6.NS.1

FORMAT Four-way card sort / match

TIME 25–30 min

GROUPING Pairs

TOPIC Interpret Division of Fractions

STANDARD 6.NS.1

PREP LEVEL Light — print and cut card sets

Learning goal *I can interpret what the quotient of a fraction division problem means in a situation.*

Teacher setup

- Print and cut one card set per pair. Mix the cards face up.
- Students match each situation to its equation and quotient.
- Before claiming a match, students say what the quotient means in the story.

Materials

Story cards, Model cards, Equation cards, Recording sheet, Pencil.

Differentiation & language support

- Fraction strips or bar models help students see “how many fit” (SPED).
- Sentence stem: “The answer means ___ groups (or parts) of ___.”
- ESOL: act out one example with real cups before sorting.

Key vocabulary (English / Español):

Term	Español	What it means
quotient	cociente	the answer to a division problem
dividend	dividendo	the amount being divided
interpret	interpretar	to explain what something means

Quick teacher check: *Ask one pair to explain the meaning of the quotient for Card 3 (sharing) vs Card 1 (how many fit).*

Fraction Division Model Match

Unit 2: Fraction Detective Agency · Lesson 2-1 · EduWonderLab

Name: _____

Date: _____

Class: _____

Your goal: *I can interpret what the quotient of a fraction division problem means in a situation.*

What you need

Story, model, and equation cards, Recording sheet.

How to play

1. Pick a situation card and write the division equation it shows.
2. Find the quotient.
3. Say what the quotient means in the story (how many groups, or how big each part is).
4. Record the equation, the quotient, and its meaning.

Situation Cards

Find the quotient, then explain what it means in the situation before you claim the match.

1. How many $\frac{1}{2}$ -cups of rice are in 3 cups?	2. How many $\frac{1}{4}$ -foot ribbons can be cut from 2 feet?
3. $\frac{3}{4}$ cup of paint is shared equally by 3 students. How much each?	4. How many $\frac{2}{3}$ -cup servings are in 4 cups?
5. How many $\frac{1}{8}$ s are in $\frac{1}{2}$?	6. How many $\frac{1}{3}$ -mile laps are in 5 miles?
7. $\frac{2}{3}$ of a pan of brownies is shared by 4 people. How much each?	8. How many $\frac{1}{5}$ s are in $\frac{3}{5}$?

Record your work (equation, quotient, meaning):

Explain your thinking

Choose one card. Explain what the quotient means using the situation, not just the number.

Sentence frame: *The answer means ___ because we are finding how many ___ fit in ___.*

★ **Challenge:** Cards 3 and 7 share part of a whole. Cards 1 and 2 count how many fit. Sort all eight cards into those two groups.

ANSWER KEY

Teacher copy — please do not distribute to students.

UNIT 2 • LESSON 2-1 • Fraction Division Model Match

Standard 6.NS.1

Answers

1. How many $\frac{1}{2}$ -cups of rice are in 3 cups? Answer: $3 \div \frac{1}{2} = 6$ half-cups	2. How many $\frac{1}{4}$ -foot ribbons can be cut from 2 feet? Answer: $2 \div \frac{1}{4} = 8$ ribbons
3. $\frac{3}{4}$ cup of paint is shared equally by 3 students. How much each? Answer: $\frac{3}{4} \div 3 = \frac{1}{4}$ cup each	4. How many $\frac{2}{3}$ -cup servings are in 4 cups? Answer: $4 \div \frac{2}{3} = 6$ servings
5. How many $\frac{1}{8}$ s are in $\frac{1}{2}$? Answer: $\frac{1}{2} \div \frac{1}{8} = 4$	6. How many $\frac{1}{3}$ -mile laps are in 5 miles? Answer: $5 \div \frac{1}{3} = 15$ laps
7. $\frac{2}{3}$ of a pan of brownies is shared by 4 people. How much each? Answer: $\frac{2}{3} \div 4 = \frac{1}{6}$ of the pan each	8. How many $\frac{1}{5}$ s are in $\frac{3}{5}$? Answer: $\frac{3}{5} \div \frac{1}{5} = 3$

Teaching notes & look-fors

- Two meanings of division: “how many groups fit” (Cards 1, 2, 4, 5, 6, 8) and “size of each share” (Cards 3, 7).
- Students should connect the meaning to the model, not just compute.
