Explore Integers and Their Opposites

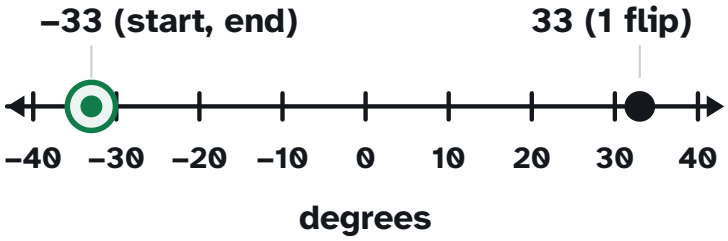
Write integers for gains, losses, above and below, and say what zero means.

Name _____ **Date** _____

Tonight's spark

In a board game, your score is –58. One card says: change your score to its opposite. A second card says the same thing. What is your score now?

Guess first: will your score end positive or negative?



Our class model: flipping to the opposite

Try it

Work it out on paper. Write one answer on each line.

1 **A savings account drops by $15. Which integer shows that change?**

A. 15 **B.** –15 **C.** 0 **D.** 1.5

My answer _____

2 **What is the opposite of 27?**

A. –27 **B.** 27 **C.** 0 **D.** 1/27

My answer _____

3 **Maya gains 9 points and then loses 9 points. What is the total change?**

A. 18 **B.** –18 **C.** 9 **D.** 0

My answer _____

4 **Which situation matches –5?**

A. 5 degrees above zero **B.** 5 dollars earned **C.** 5 feet below the ground

D. 5 points gained

My answer _____

5 **What is the opposite of the opposite of –33?**

A. 33 **B.** –33 **C.** 0 **D.** –66

My answer _____

6 **A cave is 30 meters under the ground. The ground is 0. Which integer shows the cave?**

A. –30 **B.** 30 **C.** 0 **D.** –3

My answer _____

Talk about it

After two flips across 0, where do you end up? What does that tell you?

Home mission

Write –58 on one side of a paper and 58 on the other. Flip it three times. Can your student say what shows, and why?

If we get stuck, ask

- How far from zero is it, and which side is it on?
- What does zero mean in this story?
- Is this a gain or a loss? Up or down?

Do it on a screen

Scan or type the link. Same lesson, with hints.
