

Teacher Guide

A complete implementation guide for the 18-lesson Bridge to Grade 6 resource bundle. Use as a three-week bridge course, six-week intervention cycle, tutoring curriculum, or first-quarter readiness station.

Recommended Pacing

Model	Use When	Pacing	Daily Structure
3-week bridge	Summer school or jump-start program	1 lesson per day, 5 days/week, assessment on Fridays	10 min warm-up, 20 min mini-lesson, 25 min stations, 15 min independent practice, 5 min exit ticket
6-week intervention	Small group or after school	3 lessons per week plus review	Fluency, re-teach, guided practice, targeted drill, reflection
First-quarter stations	Grade 6 readiness gaps	One part every 1-2 weeks	Teacher table, partner task, online drill, workbook page

Lesson Routine

1. **Launch:** Start with a low-floor question, quick estimate, or notice/wonder.
2. **Model:** Think aloud one example. Name the strategy, not just the answer.
3. **Guided Practice:** Students solve in pairs. Stop for one misconception check.
4. **Independent Practice:** Assign 6-10 problems from the workbook or drill book.
5. **Exit Ticket:** Score as Got It, Almost, or Re-teach. Use the next day warm-up for repair.

Teacher move: Require students to mark one estimate or reasonableness check on any computation-heavy page. This one habit transfers across Grade 6 units.

Unit Map and Teaching Notes

Part	Lessons	Core Move	Common Misconceptions	Recommended Supports
1	Place value, decimal operations, estimation	Represent numbers with words, expanded form, and benchmarks.	Misreading decimal places; multiplying decimals without estimating.	Place-value charts, base-ten sketches, money contexts.
2	Equivalent fractions, fraction operations, multiplication/division meaning	Connect visual models to procedures before symbolic fluency.	Adding denominators; treating division by a fraction as always smaller.	Number lines, fraction strips, area models, sentence frames.
3	Ratios, rates, percent benchmarks	Use tables to preserve multiplicative relationships.	Confusing additive and multiplicative growth; part-to-part vs part-to-whole ratios.	Tape diagrams, double number lines, shopping comparisons.
4	Expressions, equations, coordinates	Say what each variable represents and check by substitution.	Ignoring order of operations; reversing ordered pairs.	Balance scales, expression cards, floor grid practice.
5	Area, volume, data	Decompose shapes and explain units.	Confusing perimeter/area/volume; choosing mean when outliers distort.	Grid paper, nets, unit cube sketches, class data sets.
6	Multi-step problems, strategy choice, readiness task	Plan before calculating and justify choices.	Using all numbers automatically; stopping after one operation.	CUBES-style annotation, strategy menu, peer explanation protocol.

Station Rotation Menus

Teacher Table

- Re-teach the exit-ticket gap.
- Ask students to explain one incorrect sample.
- Use whiteboards for rapid checks.

Partner Practice

- One student solves, one student audits.
- Switch roles every problem.
- Require one written explanation per pair.

Fluency Sprint

- 6 minutes only.
- Accuracy first, speed second.
- Students circle two items to review.

Application Task

- Use the workbook word problem.
- Students choose a representation.
- Gallery walk two strategies.

Differentiation

Need	Support	Extension
Language access	Preview vocabulary, use visuals, provide sentence frames: "I know ____ because ____."	Have students write their own context problem and trade with a partner.
Computation fluency	Use smaller numbers first, then preserve the same structure with grade-level numbers.	Ask for two solution methods and a reasonableness check.
Attention or stamina	Chunk pages into Must Do, Should Do, Could Do. Use timers and visible goals.	Let students design a mini-drill for a peer.
Conceptual gaps	Return to models: number line, tape diagram, area model, grid.	Ask students to compare when two strategies are equivalent.

Answer Key Snapshot

Use this key for fast checking. Accept equivalent fractions, accurate models, and clear alternate strategies.

Lesson	Selected Answers
1	$503.079 = 500 + 3 + 0.07 + 0.009$; $6.205 < 6.250$; 18.95.
2	21.33; 22.14; 3.64; 6.2; 0.036; 10.8.
4	$\frac{3}{4} = \frac{6}{8} = \frac{9}{12} = \frac{12}{16}$; $\frac{18}{24} = \frac{3}{4}$.
5	$\frac{1}{2}$; $\frac{3}{8}$; $2\frac{1}{2}$; $2\frac{5}{6}$; $1\frac{5}{12}$ cups.
8	40 mph; \$1.50 per pen; 12 oz for \$3.00 is cheaper; 108 pages.
9	8; 16; 69; 3.5; 9; sale price \$30.
11	$x=13$; $p=23$; $m=9$; $n=42$; $a + 12 = 31$.
13	40 square units; 30 square units; 108 square feet; missing side 8.
14	60 cubic units; 24 cubes; surface area 52 square units.
15	Mean 7; median 7.

Rubric for Readiness Task

Score	Math Accuracy	Reasoning	Communication
4	Calculations are accurate and efficient.	Uses multiple Grade 6-ready concepts with clear justification.	Work is organized, labeled, and easy to follow.
3	Minor errors do not affect the main solution.	Explains choices and includes at least one check.	Most work is labeled and understandable.
2	Several calculation errors or incomplete sections.	Some strategy is visible, but justification is thin.	Reader must infer parts of the thinking.
1	Little accurate computation is shown.	No clear plan or reasoning.	Work is missing, scattered, or not connected to the task.
