

LESSON 2-10 • SESSION 1 • GUIDED NOTES**Mean or Median?**

Learning target – I can choose the mean or the median to describe a data set based on its shape. • 6.SP.B.5d

WORDS TO KNOW*fill in the missing words*

WORD	WHAT IT MEANS	EXAMPLE
outlier <i>valor atípico</i>	A value ____ away from the others.	2, 3, 4, 32: 32
skewed <i>asimétrico</i>	Most values sit on one side, with a long ____.	tail to the right
symmetric <i>simétrico</i>	Both sides of the data look about the ____.	20, 22, 24, 26, 28
measure of center <i>medida de centro</i>	One number that shows a _____ value.	mean or median

KEY IDEA*complete each sentence*

- An outlier pulls the ____ toward it, but barely moves the median.
- Skewed data or an outlier: use the _____. Symmetric data: use the mean.

WORKED EXAMPLE*fill in the blanks as we solve*

Five friends saved \$6, \$7, \$8, \$9 and \$50. Which center describes a typical friend?

Step 1 The outlier is ____.**Step 2** Median: the middle of 6, 7, 8, 9, 50 is ____.**Step 3** Mean: $80 \div 5 =$ ____, more than four of the five savings.**Answer** Use the ____: **about \$8.****YOU TRY***use the example as a model*

- Write the better measure of center: mean or median.

a. 70, 72, 74, 76, 78 _____**b.** 7, 8, 9, 10, 65 _____

- Comic book prices are \$4, \$5, \$6, \$7 and \$53. Find the mean and median. Which is better?

*Show your work.***Better center** _____**SUM IT UP***in your own words**I use the median instead of the mean when ____ because ____.*

LESSON 2-10 • SESSION 2 • GUIDED NOTES

Matching Center and Spread

Learning target – I can match a measure of center and a measure of spread to the shape of a data set. · 6.SP.B.5d

WORDS TO KNOW*fill in the missing words*

WORD	WHAT IT MEANS	EXAMPLE
symmetric <i>simétrico</i>	Both sides of the data look about the ____.	20, 22, 24, 26, 28
skewed <i>asimétrico</i>	Most values sit on one side, with a long ____.	20, 22, 24, 26, 150
mean and MAD <i>media y DMA</i>	The pair for _____ data with no outlier.	center plus average distance
median and IQR <i>mediana y rango intercuartil</i>	The pair for skewed data or data with an ____.	middle plus middle half

KEY IDEA*complete each sentence*

- MAD is built from the ____; IQR is built from the median. Never mix the pairs.
- Look for an outlier or a long ____ before you choose a pair.

WORKED EXAMPLE*fill in the blanks as we solve*

Set C: 20, 22, 24, 26, 28. Set D: 20, 22, 24, 26, 150. Pick a pair for each.

Step 1 Set C is ____: mean 24, $MAD\ 12 \div 5 = 2.4$.**Step 2** Set D has an outlier, ____: median 24.**Answer C: mean and MAD. D: ____ and IQR.****YOU TRY***use the example as a model***1.** Write the pair you would report.**a.** 40, 42, 44, 46, 48 _____**b.** 40, 42, 44, 46, 300 _____**2.** Seven values are 22, 24, 26, 28, 30, 32, 320. Find the median and the IQR.*Show your work.***Median, IQR** _____**SUM IT UP***in your own words*

I report the median and IQR when ____ because ____.
