

Comparing Ratios with Common Terms

1. Scale each ratio so the first term is 12.

a. $4 : 5 = 12 : \underline{\hspace{2cm}}$

b. $6 : 11 = 12 : \underline{\hspace{2cm}}$

2. Mix A: 2 cups juice to 3 cups water. Mix B: 3 cups juice to 5 cups water. Scale both to 6 cups of juice. Which mix is juicier?

Show your work.

Juicier mix _____

3. Two mixes have the same amount of soap. The stronger mix has –

A more water

B less water

C more soap

D the same water

HOW DID IT GO? ☐ I got it ☐ Almost ☐ I need help

Comparing Rates with Benchmarks

1. Find each unit rate.

a. 60 miles in 4 hours ____ per hour

b. \$12 for 5 notebooks ____ each

2. Pack A: 4 pens for \$3. Pack B: 6 pens for \$5. Use a 12-pen benchmark to find the better buy.

Show your work.

Better buy _____

3. Using a benchmark lets you compare rates without having to –

A divide

B multiply

C read the problem

D use the same amount
