

LESSON 3-5 • SESSION 1 • GUIDED NOTES

Comparing Ratios with Common Terms

Learning target – I can compare two ratios by scaling them until they share a common term. • 6.RP.A.3b

WORDS TO KNOW

fill in the missing words

WORD	WHAT IT MEANS	EXAMPLE
common multiple <i>múltiplo común</i>	A number both terms can be ____ to.	2 and 3 both reach 6
least common multiple <i>mínimo común múltiplo</i>	The ____ number that is a multiple of both numbers.	LCM of 2 and 3 is 6
stronger <i>más fuerte</i>	More of the main ingredient for the ____ amount of water.	6 : 14 is stronger than 6 : 15

KEY IDEA

complete each sentence

- To compare two ratios, scale them so one term is the ____ in both.
- Then compare the ____ term. Less water for the same soap means a ____ mix.

WORKED EXAMPLE

fill in the blanks as we solve

Mix A has 2 spoons of soap to 5 cups of water. Mix B has 3 spoons of soap to 7 cups of water. Which mix is stronger?

Step 1 A common multiple of 2 and 3 is ____.

Step 2 Mix A $\times 3 = 6 : \underline{\hspace{1cm}}$. Mix B $\times 2 = 6 : \underline{\hspace{1cm}}$.

Step 3 Compare the water: 14 cups is less than 15 cups.

Answer Mix ____ is stronger: less water for the same 6 spoons of soap.

YOU TRY

use the example as a model

1. Tea A uses 2 bags for 9 cups of water. Tea B uses 3 bags for 12 cups. Scale both to 6 bags. Which tea is stronger?

Show your work.

Stronger tea _____

2. Scale each ratio so the first term is 20.

a. $4 : 7 = 20 : \underline{\hspace{1cm}}$

b. $5 : 6 = 20 : \underline{\hspace{1cm}}$

SUM IT UP

in your own words

To compare two ratios, I make ____ the same, and then I compare ____.

LESSON 3-5 • SESSION 2 • GUIDED NOTES

Comparing Rates with Benchmarks

Learning target – I can use a benchmark to compare two rates without dividing. · 6.RP.A.3b

WORDS TO KNOW fill in the missing words

WORD	WHAT IT MEANS	EXAMPLE
benchmark <i>punto de referencia</i>	A shared amount you scale ____ choices to.	12 lb for both stores
rate <i>tasa</i>	Compares two amounts with _____ units.	\$10 for 4 lb
unit rate <i>tasa unitaria</i>	The amount for exactly ____.	\$2.50 per lb

KEY IDEA complete each sentence

- Pick a benchmark that both amounts _____ into evenly, like 20 for 2 and 4.
- Scale each rate to the benchmark, then _____ the results.

WORKED EXAMPLE fill in the blanks as we solve

Hose A fills 6 gallons in 2 minutes. Hose B fills 10 gallons in 4 minutes. Which hose fills faster?

- Step 1** Benchmark: ____ minutes for both hoses.
- Step 2** Hose A: $6 \times 10 =$ ____ gallons. Hose B: $10 \times 5 =$ ____ gallons.
- Step 3** Compare: 60 gallons > 50 gallons in the same 20 minutes.
- Answer** Hose ____ fills faster.

YOU TRY use the example as a model

1. Store A: 3 lb for \$8. Store B: 4 lb for \$10. Use a 12-lb benchmark. Which is the better buy?

	Pounds	Cost	Cost of 12 lb
Store A	3	\$8	
Store B	4	\$10	

Better buy _____

2. Name a benchmark both amounts can reach.
- a. 4 min and 6 min ____ b. 5 lb and 8 lb ____

SUM IT UP in your own words

A benchmark helps me compare two rates because ____.
