

LESSON 3-6 • SESSION 1 • GUIDED NOTES

Customary Unit Conversions

Learning target – I can convert between customary units by multiplying or dividing by the conversion rate. • 6.RP.A.3d

WORDS TO KNOW*fill in the missing words*

WORD	WHAT IT MEANS	EXAMPLE
customary units <i>unidades usuales</i>	U.S. units like inches, _____, cups and gallons.	12 in = 1 ft
convert <i>convertir</i>	Write the same amount with a _____ unit.	6 ft = 72 in
conversion factor <i>factor de conversión</i>	A fact that shows two _____ amounts.	1 lb = 16 oz

KEY IDEA*complete each sentence*

- Big unit to small unit: _____. The number gets bigger.
- Small unit to big unit: _____. The number gets smaller.

WORKED EXAMPLE*fill in the blanks as we solve*

A pitcher holds 2 quarts. How many fluid ounces is that? (1 qt = 4 cups, 1 cup = 8 fl oz)

Step 1 Quarts to cups: $2 \times 4 = \underline{\hspace{1cm}}$ cups.**Step 2** Cups to fluid ounces: $8 \times 8 = \underline{\hspace{1cm}}$ fl oz.**Step 3** Check backward: $64 \div 8 = 8$ cups, and $8 \div 4 = \underline{\hspace{1cm}}$ quarts.**Answer** **2 quarts = _____ fluid ounces.****YOU TRY***use the example as a model*

1. Convert each measure.

a. 3 yd = _____ ft

b. 32 oz = _____ lb

2. A banner needs 7 feet of fabric. Fabric is sold by the whole yard. How many yards should you buy?
(1 yd = 3 ft)

*Show your work.***Answer** _____ yards**SUM IT UP***in your own words*

When I convert to a smaller unit, I _____ because _____.

LESSON 3-6 • SESSION 2 • GUIDED NOTES**Metric Unit Conversions**

Learning target – I can convert between metric units by multiplying or dividing by powers of ten. · 6.RP.A.3d

WORDS TO KNOW*fill in the missing words*

WORD	WHAT IT MEANS	EXAMPLE
metric units <i>unidades métricas</i>	Meters, grams and liters, built on ____.	1 km = 1,000 m
kilo- / centi- / milli- <i>kilo- / centi- / mili-</i>	Kilo means ____ times. Centi means one hundredth. Milli means one thousandth.	km, cm, mL
powers of 10 <i>potencias de 10</i>	10, 100, 1,000. Metric changes ____ the decimal point.	3.5 m = 350 cm

KEY IDEA*complete each sentence*

- Big unit to small unit: _____ by 10, 100 or 1,000. Small to big: divide.
- Make the units _____ before you divide or compare.

WORKED EXAMPLE*fill in the blanks as we solve*

A bag has 2.4 kg of flour. How many 300 g portions can you make? (1 kg = 1,000 g)

Step 1 Make the units match: $2.4 \times 1,000 = \underline{\hspace{1cm}}$ g.**Step 2** Divide: $2,400 \div 300 = \underline{\hspace{1cm}}$.**Step 3** Check: $8 \times 300 = 2,400$ g.**Answer** You can make 8 portions.**YOU TRY***use the example as a model***1.** Convert each measure.**a.** 3.2 m = ____ cm**b.** 750 g = ____ kg**2.** A tank holds 15 L of water. How many 750 mL jugs does it take to fill the tank? (1 L = 1,000 mL)*Show your work.***Answer** _____ jugs**SUM IT UP***in your own words*

To convert metric units, I move the decimal point because ____.
