

LESSON 3-7 • HOMEWORK PACKET • SHEET 1 OF 2

Customary vs. Metric Conversions

Maryland Standard 6.RP.A.3d • Learning target – I can convert a measurement between the customary and metric systems using a given rate.

REMEMBER

- Use the rate you are given, such as 1 in = 2.54 cm, 1 mi $\approx$ 1.6 km, 1 kg $\approx$ 2.2 lb.
- Converting to a **smaller** unit: multiply. Converting to a **larger** unit: divide.
- Write $\approx$ (about) when the rate is rounded.

WORKED EXAMPLE

A hiking trail is 12 kilometers long. About how many miles is that? (1 mi $\approx$ 1.6 km)

Step 1 A mile is longer than a kilometer, so there are fewer miles. Divide.

Step 2 $12 \div 1.6 = 7.5$

Answer about 7.5 miles

PRACTICE

show your work • label units

1. Convert. Use the rate given.

a. 6 in (1 in = 2.54 cm) = ____ cm

b. 25 mi (1 mi $\approx$ 1.6 km) $\approx$ ____ km

c. 11 lb (1 kg $\approx$ 2.2 lb) $\approx$ ____ kg

d. 3 gal (1 gal $\approx$ 3.8 L) $\approx$ ____ L

e. 50 kg (1 kg $\approx$ 2.2 lb) $\approx$ ____ lb

f. 8 km (1 mi $\approx$ 1.6 km) $\approx$ ____ mi

g. 4.4 lb (1 kg $\approx$ 2.2 lb) $\approx$ ____ kg

h. 10 mi (1 mi $\approx$ 1.6 km) $\approx$ ____ km

2. Complete the ratio table. (1 kg $\approx$ 2.2 lb)

Kilograms	1	5		25
Pounds	2.2		22	

3. **Road Sign.** A road sign says the next city is 96 km away. About how many miles away is it? (1 mi $\approx$ 1.6 km)

Show your work.

Answer _____ miles

4. **Suitcase.** An airline allows a suitcase of up to 23 kg. Ella's suitcase weighs 55 lb. (1 kg $\approx$ 2.2 lb)

a. About how many kilograms does the suitcase weigh? _____ kg

b. Is it under the limit? By how much is it over or under? _____

5. **Compare.** Which race is longer: a 100-meter race or a 100-yard race? (1 m $\approx$ 1.09 yd) Explain.

CHECK YOURSELF

☐ I can do this on my own

☐ I need a little help

☐ I have a question about #____

AT HOME Find a label that shows both systems (like 1 lb (454 g)). Check that the two amounts make sense.

LESSON 3-7 • HOMEWORK PACKET • SHEET 2 OF 2**Multi-Step System Conversions and Dosage**

Maryland Standard 6.RP.A.3d • Learning target – I can solve a multi-step problem that requires converting units before using a rate.

REMEMBER

- **First** convert to the unit the rate uses. **Then** apply the rate.
- Keep track of the units at every step. Label your final answer.

WORKED EXAMPLE

A dog weighs 55 lb. The dose is 6 mg per kg. (1 kg $\approx$ 2.2 lb) Find the dose.

Step 1 Convert to kilograms: $55 \div 2.2 = 25$ kg

Step 2 Apply the rate: $25 \times 6 = 150$

Answer 150 mg

PRACTICE*show your work • label units*

- Complete each step. (1 kg $\approx$ 2.2 lb; 1 tbsp = 3 tsp; 1 L = 1,000 mL)
 - 77 lb $\approx$ _____ kg
 - 35 kg $\times$ 4 mg per kg = _____ mg
 - 2 tbsp = _____ tsp
 - 1.5 L = _____ mL
- Cat Medicine.** A cat weighs 8.8 lb. The dose is 5 mg per kg. (1 kg $\approx$ 2.2 lb)
 - Weight in kilograms: _____ kg
 - Dose: _____ mg
- Track Practice.** Rosa runs 4 laps of a 400-meter track each day for 5 days. (1 mi $\approx$ 1.6 km)
 - Total meters: _____ m
 - Total kilometers: _____ km
 - About how many miles? _____ miles
- Medicine Bottle.** A bottle holds 120 mL of medicine. One dose is 2 teaspoons. (1 tsp $\approx$ 5 mL)
 - About how many milliliters are in one dose? _____ mL
 - About how many doses are in the bottle? _____ doses
- Find the Error.** A goat weighs 66 lb. The vitamin dose is 3 mg per kg. Nia multiplied $66 \times 3 = 198$ mg. Explain her mistake and find the correct dose. (1 kg $\approx$ 2.2 lb)

TEST PRACTICE*choose the best answer*

- A dog weighs 33 lb. The dose is 2 mg per kg. (1 kg $\approx$ 2.2 lb) What is the dose?
A 30 mg **B** 66 mg **C** 145.2 mg **D** 15 mg
- A soup recipe needs 3 quarts of broth. About how many liters is that? (1 qt $\approx$ 0.95 L)
A 2.85 L **B** 3.16 L **C** 0.95 L **D** 12 L

CHECK YOURSELF

☐ I can do this on my own ☐ I need a little help ☐ I have a question about #_____

AT HOME Explain to someone at home why a nurse converts pounds to kilograms before finding a dose.
