

LESSON 6-4 • SESSION 1 • GUIDED NOTES

Writing Numerical Expressions

Learning target – I can write a numerical expression that matches a situation. • 6.EE.A.2

WORDS TO KNOW*fill in the missing words*

WORD	WHAT IT MEANS	EXAMPLE
numerical expression <i>expresión numérica</i>	Numbers and operations with no ____ sign.	$4 \times 9 + 3$
evaluate <i>evaluar</i>	Find the one ____ an expression equals.	$4 \times 9 + 3 = 39$
product <i>producto</i>	The answer when you ____.	the product of 6 and 7 is 6×7

KEY IDEA*complete each sentence*

- Equal groups (“each,” “per”) in a story usually mean ____.
- A total of different groups means ____ the products.
- “Less than” flips the order: 5 less than 12 is ____ – 5.

WORKED EXAMPLE*fill in the blanks as we solve*

A team buys 6 shirts at \$7 each and 1 hat for \$5. Write an expression for the total cost. Evaluate it.

Step 1 Shirts are equal groups: $6 \times$ ____.

Step 2 Add the one hat: $6 \times 7 +$ ____.

Step 3 Evaluate: $42 + 5 =$ ____.

Answer $6 \times 7 + 5 = \$$ ____

YOU TRY*use the example as a model*

1. Write a numerical expression.

a. the product of 6 and 4, plus 2 ____ b. 10 less than 35 ____

2. Jo buys 3 books at \$5 each and a \$4 bookmark. Write an expression for the total cost. Evaluate it.

Show your work.

Answer _____ dollars

SUM IT UP*in your own words*

To write an expression for a story, I look for ____ because ____.

LESSON 6-4 • SESSION 2 • GUIDED NOTES**Order of Operations with Powers**

Learning target – I can evaluate an expression that contains grouping symbols and powers using the order of operations.
6.EE.A.2c

WORDS TO KNOW*fill in the missing words*

WORD	WHAT IT MEANS	EXAMPLE
order of operations <i>orden de las operaciones</i>	The rules for which ____ to do first, next and last.	(), powers, $\times \div$, $+$ $-$
grouping symbols <i>símbolos de agrupación</i>	Parentheses or brackets; do the work ____ them first.	$(9 - 7)$
left to right <i>de izquierda a derecha</i>	Do partner steps ($\times$ and $\div$, or $+$ and $-$) in the order they ____.	$24 \div 4 \times 2 = 6 \times 2 = 12$

KEY IDEA*complete each sentence*

- First do work inside _____ symbols, then evaluate _____.
- Next multiply and divide from _____ to right.
- Last, add and subtract from left to _____.

WORKED EXAMPLE*fill in the blanks as we solve*Evaluate $40 - (2 + 3)^2 \div 5$.**Step 1** Parentheses: $2 + 3 = \underline{\hspace{1cm}}$, so $40 - 5^2 \div 5$.**Step 2** Power: $5^2 = \underline{\hspace{1cm}}$, so $40 - 25 \div 5$.**Step 3** Divide, then subtract: $40 - \underline{\hspace{1cm}}$.**Answer** $40 - (2 + 3)^2 \div 5 = \underline{\hspace{1cm}}$ **YOU TRY***use the example as a model***1.** Evaluate.

a. $12 - 2 \times 5 = \underline{\hspace{1cm}}$

b. $(3 + 1)^2 = \underline{\hspace{1cm}}$

2. Evaluate $6 + 2^3 \times 3$.*Show your work.***Value** _____**SUM IT UP***in your own words*In $2 + 3 \times 4^2$, I start with ____ because ____.
