UNIT 2 · STANDARD 6.DS.4

Describe the Data Using the Median

Lesson 2-3 · Teacher Copy

Name: _____ **Date:** _____ **Class:** _____

My Notes

Level 2 Standard

🎯 **TODAY'S OBJECTIVES**

Content Objective: I can find the median of a data set and use it to describe what is typical.

Language Objective: I can explain the median using the words order, middle, typical, and half.

📖 See **Learn It** for the explanation and worked examples, and the **Vocab** tab for the words. These are your notes to fill in and keep.

✏️ **Fill in each blank as we go. Use the Word Bank to help you.**

📚 **WORD BANK — FILL EACH BLANK WITH THE BEST WORD**

Median · Mode · Outlier · Data distribution · Variability · Measure of center · Halfway value

1. The middle value of a data set when the numbers are in order is the _____.

2. The value that appears most often in a data set is the _____.

3. A value that is much larger or smaller than the rest of the data is an _____.

4. The overall shape of where the data values fall is the _____.

5. How much the data values differ from each other is the _____.

6. One number that describes a typical value is a _____.

7. When a data set has two middle values, the median is the _____ between them.

Write About the Math

Who is using the mean, and who is using the mode? Which is more useful here?
¿Quién está usando la media y quién la moda? ¿Cuál es más útil aquí?

Say your answer to a partner first. Then write it, using at least two of these words:

- ☐ **Median** — *Mediana*
- ☐ **Mode** — *Moda*
- ☐ **Outlier** — *Valor atípico*
- ☐ **Data distribution** — *Distribución de datos*
- ☐ **Variability** — *Variabilidad*

Model: *Mean, median, and mode each describe the center of the data in a different way.* — Students distinguish the three measures and justify a choice, noting the mode (38) is the most repeated and the mean/median sit near the center.

Start

Complete the frames. Use the word bank.

Completa las oraciones. Usa el banco de palabras.

- **The teacher used the ___ (about 86.6). The student used the ___ (92). The ___ is more useful here because ___.**
- **My answer is ___ because ___.**
  Mi respuesta es ___ porque ___.

Build

Write two connected sentences. Use because, so, or but.

Escribe dos oraciones conectadas. Usa porque, entonces o pero.

- **My claim is ___.**
  Mi afirmación es ___.
- **My evidence is ___, so ___.**
  Mi evidencia es ___, entonces ___.

Explain

Write a claim, give math evidence, and explain your reasoning.

Escribe una afirmación, da evidencia matemática y explica tu razonamiento.

- [ ] I answered the question.
- [ ] I used math evidence: numbers, an equation, or a model.
- [ ] I used at least two math words.

Writing Guide — Teacher Copy

- The answer to the math question is correct.
- The evidence is real lesson mathematics (numbers, equation, or model), not restated claim.
- The support level changed the language scaffolding, never the mathematical expectation.

Answer Key & Teacher Guide

1. **Notes 1:** Median
2. **Notes 2:** Mode
3. **Notes 3:** Outlier
4. **Notes 4:** Data distribution
5. **Notes 5:** Variability
6. **Notes 6:** Measure of center
7. **Notes 7:** Halfway value

8. **Watch for this mistake:** *A common mistake in Mean, Median, and Mode is finding the median without ordering the data first — students pick the middle number straight from the list as given (for 9, 4, 7, 2, 6 they say the median is 7, the middle position in that original order) instead of sorting least to greatest (2, 4, 6, 7, 9) and finding the true middle value, 6. Before finalizing a median, always reorder the data smallest to largest, then count to the middle position — and if there is an even number of values, average the two middle numbers.*
9. **Try It 1:** A. 4 — *The mode is the value that appears most often. 4 shows up twice; every other value appears once. So the mode is 4.*
10. **Try It 2:** D. The median, because the outlier barely moves the middle value — *A high outlier pulls the mean upward, making it larger than most games. The median is the middle of the ordered data, so one unusual game barely changes it — it best describes a typical game.*
