UNIT 3 · STANDARD 6.AT.3A

Determine Equivalent Ratios Using Graphs

Lesson 3-4

Name: _____ **Date:** _____ **Class:** _____

My Notes

Level 3 Enrichment

🎯 **TODAY'S OBJECTIVES**

Content Objective: I can graph the values from a ratio table as points on the coordinate plane.

Language Objective: I can explain my graph using the words coordinate plane, ordered pair, origin, and proportional.

📖 See **Learn It** for the explanation and worked examples, and the **Vocab** tab for the words. These are your notes to fill in and keep.

✏️ **Fill in each blank as we go. Use the Word Bank to help you.**

📚 **WORD BANK — FILL EACH BLANK WITH THE BEST WORD**

Coordinate plane · **Ordered pair** · **Linear pattern** · **Proportional** · **Origin** · **Ratio table** · **Unit rate point** · **Interpret** · **Coordinates**

Level 3: try the blanks from memory first, then check the bank.

1. The flat grid formed by a horizontal and a vertical number line is the _____.

2. A set of two numbers (x, y) that names a point is an _____.

3. When graphed points form a straight line, they show a _____.

4. Two quantities that always keep the same ratio are _____.

5. The point (0, 0) where the two axes meet is the _____.

6. A table that lists equivalent ratios in rows or columns is a _____.

7. The point (1, r) on a ratio graph is the _____.

8. To say what a point means in words is to _____ it.

9. The x-value and y-value of a point are its _____.

Write About the Math

A food truck tracks how many tacos it sells and how much salsa it uses. After recording data for a week, the owner plots the points on a graph and notices they form a straight line. This helps the owner predict exactly how much salsa to prepare for any number of tacos?

Say your answer to a partner first. Then write it, using at least two of these words:

- ☐ **Coordinate plane** — *Plano cartesiano*
- ☐ **Ordered pair** — *Par ordenado*
- ☐ **Linear pattern** — *Patrón lineal*
- ☐ **Proportional** — *Proporcional*
- ☐ **Origin** — *Origen*

Model: *The points form a straight line, and each sundae adds 2 ounces of sauce.* — Listen for 'straight line through the origin' and the connection that the constant 2-ounce step shows a proportional relationship.

Start

Complete the frames. Use the word bank.

Completa las oraciones. Usa el banco de palabras.

- **Every point on the line has the same ratio — ___ taco to ___ ounces of salsa — so 10 tacos would use ___ ounces.**
- **My answer is ___ because ___.**
  Mi respuesta es ___ porque ___.

Build

Write two connected sentences. Use because, so, or but.

Escribe dos oraciones conectadas. Usa porque, entonces o pero.

- **My claim is ___.**
  Mi afirmación es ___.
- **My evidence is ___, so ___.**
  Mi evidencia es ___, entonces ___.

Explain

Write a claim, give math evidence, and explain your reasoning.

Escribe una afirmación, da evidencia matemática y explica tu razonamiento.

- [ ] I answered the question.
- [ ] I used math evidence: numbers, an equation, or a model.
- [ ] I used at least two math words.
