UNIT 4 · STANDARD 6.AT.4

Relate Fractions, Decimals, and Percentages

Lesson 4-2 · Teacher Copy

Name: _____ **Date:** _____ **Class:** _____

My Notes

Level 3 Enrichment

🎯 **TODAY'S OBJECTIVES**

Content Objective: I can write equivalent fractions, decimals, and percents for the same value.

Language Objective: I can explain my conversions using the words percent, decimal, equivalent, and benchmark.

📖 See **Learn It** for the explanation and worked examples, and the **Vocab** tab for the words. These are your notes to fill in and keep.

✏️ **Fill in each blank as we go. Use the Word Bank to help you.**

📚 **WORD BANK — FILL EACH BLANK WITH THE BEST WORD**

Percent | Decimal | Equivalent | Benchmark | Discount | Hundredths | Common form

Level 3: try the blanks from memory first, then check the bank.

1. A ratio that compares a number to 100, written with a % sign, is a _____.

2. A number that uses a point to show parts of a whole is a _____.

3. Having the same value but written a different way is being _____ .

4. A common, easy-to-remember value like 50% or 1/4 used for comparing is a _____ .

5. An amount taken off a price, often given as a percent, is a _____ .

6. The decimal place that shows parts out of 100 is the _____ place.

7. Rewriting every value the same way puts them in a _____ .

Write About the Math

Who is correct, and how much would the game cost on sale?
¿Quién tiene razón, y cuánto costaría el juego en oferta?

Say your answer to a partner first. Then write it, using at least two of these words:

- ☐ **Percent** *Porcentaje*
- ☐ **Decimal** *Decimal*
- ☐ **Equivalent** *Equivalente*
- ☐ **Benchmark** *Referencia*
- ☐ **Discount** *Descuento*

Model: *3/4, 0.75, and 75% all name the same score.* — Students give 3/4 = 0.75 = 75% and recognize these are three forms of one value, not three different scores.

Start

Complete the frames. Use the word bank.

Completa las oraciones. Usa el banco de palabras.

- **The friend who said ___% is correct because 3/5 = ___ = ___%. The sale price is $___.**
- **My answer is ___ because ___.**
  Mi respuesta es ___ porque ___.

Build

Write two connected sentences. Use because, so, or but.

Escribe dos oraciones conectadas. Usa porque, entonces o pero.

- **My claim is ___.**
  Mi afirmación es ___.
- **My evidence is ___, so ___.**
  Mi evidencia es ___, entonces ___.

Explain

Write a claim, give math evidence, and explain your reasoning.

Escribe una afirmación, da evidencia matemática y explica tu razonamiento.

- [ ] I answered the question.
- [ ] I used math evidence: numbers, an equation, or a model.
- [ ] I used at least two math words.

Writing Guide — Teacher Copy

- The answer to the math question is correct.
- The evidence is real lesson mathematics (numbers, equation, or model), not restated claim.
- The support level changed the language scaffolding, never the mathematical expectation.

Answer Key & Teacher Guide

1. **Notes 1:** Percent
2. **Notes 2:** Decimal
3. **Notes 3:** Equivalent
4. **Notes 4:** Benchmark
5. **Notes 5:** Discount
6. **Notes 6:** Hundredths
7. **Notes 7:** Common form

8. **Watch for this mistake:** *A common mistake in Relate Fractions, Decimals, and Percents is treating the numerator and denominator as the percent's digits — turning 3/5 into "35%" by just reading the 3 and the 5. Percent means out of 100, so the fix is to build an equivalent fraction with denominator 100: 5 × 20 = 100, so multiply the top by 20 too — 3/5 = 60/100 = 60%. A second version of this mistake is scaling only ONE part of the fraction (writing 3/5 = 3/100 or 60/5). Whatever you multiply the denominator by, you must multiply the numerator by the same number. When a denominator will not reach 100 evenly (8, 3, 7), divide the numerator by the denominator instead and then multiply by 100.*
9. **Try It 1:** B. 25% and 1/4 — *Move the decimal two places: 0.25 = 25%. As a fraction, 0.25 = 25/100 = 1/4.*
10. **Try It 2:** B. 0.6 and 60% — *5 × 20 = 100 and 3 × 20 = 60, so 3/5 = 60/100 = 0.6 = 60%.*
