UNIT 4 · STANDARD 6.AT.4

Determine the Whole Given the Part and Percent

Lesson 4-5 · Teacher Copy

Name: _____ **Date:** _____ **Class:** _____

My Notes

Level 3 Enrichment

🎯 **TODAY'S OBJECTIVES**

Content Objective: I can determine the whole when I know a part and the percent that part represents.

Language Objective: I can explain how I found the whole using the words part, whole, percent, and equation.

📖 See **Learn It** for the explanation and worked examples, and the **Vocab** tab for the words. These are your notes to fill in and keep.

✏️ **Fill in each blank as we go. Use the Word Bank to help you.**

📚 **WORD BANK — FILL EACH BLANK WITH THE BEST WORD**

Part **Whole** **Double number line** **Equation** **Percent** **Inverse operation**

Level 3: try the blanks from memory first, then check the bank.

1. How much of the base you get — your answer — is the _____ .

2. The full amount a percent is measured against is always _____ %.

3. Two parallel lines pairing amounts with their percents form a _____ _____ _____ .

4. The percent number sentence is part = _____ × _____ .

5. The word that means “per hundred” is _____ .

6. Division is the _____ of multiplication.

Write About the Math

What did the car cost when they bought it, and how does your method show it?
¿Cuánto costó el carro cuando lo compraron, y cómo lo muestra tu método?

Say your answer to a partner first. Then write it, using at least two of these words:

- ☐ **Part** — *Parte*
- ☐ **Whole** — *Total*
- ☐ **Double number line** — *Recta numérica doble*
- ☐ **Equation** — *Ecuación*
- ☐ **Percent** — *Porcentaje*

Model: *The original price is the whole (100%), and $42 is only part of it (60%), so the whole must be more than $42.* — Students reason from 60% < 100% to whole > part, without computing anything.

Start

Complete the frames. Use the word bank.

Completa las oraciones. Usa el banco de palabras.

- **The $26,600 is the ___ and the purchase price is the ___. Written as an equation, 0.7v = ___. Dividing both sides by ___ gives v = ___. The whole is ___ than the part, which makes sense because 70% is less than 100%.**
- **My answer is ___ because ___.**
  Mi respuesta es ___ porque ___.

Build

Write two connected sentences. Use because, so, or but.

Escribe dos oraciones conectadas. Usa porque, entonces o pero.

- **My claim is ___.**
  Mi afirmación es ___.
- **My evidence is ___, so ___.**
  Mi evidencia es ___, entonces ___.

Explain

Write a claim, give math evidence, and explain your reasoning.

Escribe una afirmación, da evidencia matemática y explica tu razonamiento.

- [ ] I answered the question.
- [ ] I used math evidence: numbers, an equation, or a model.
- [ ] I used at least two math words.

Writing Guide — Teacher Copy

- The answer to the math question is correct.
- The evidence is real lesson mathematics (numbers, equation, or model), not restated claim.
- The support level changed the language scaffolding, never the mathematical expectation.

Answer Key & Teacher Guide

1. **Notes 1:** Part
2. **Notes 2:** Whole
3. **Notes 3:** Double number line
4. **Notes 4:** Equation
5. **Notes 5:** Percent
6. **Notes 6:** Inverse operation

7. **Watch for this mistake:** *A common mistake when finding the whole is multiplying by the percent instead of dividing. For "$42 is 60% of the original price," computing 0.6 × 42 = $25.20 makes the original price SMALLER than the sale price — impossible for a discount. Since percent × whole = part, the whole is found by dividing: 42 ÷ 0.6 = $70. Whenever the percent is less than 100%, the whole must come out larger than the part, so a smaller answer is the tell.*
8. **Try It 1:** — *"Of what number?" signals a missing whole. "What is __% of __?" hands you the whole and asks for the part.*
9. **Try It 2:** — *Every one is the same move: divide the part by the percent written as a decimal.*
