UNIT 5 · STANDARD 6.GR.1

Apply Area Concepts to Solve Problems

Lesson 5-4 · Teacher Copy

Name: _____ **Date:** _____ **Class:** _____

My Notes

Level 2 Standard

🎯 **TODAY'S OBJECTIVES**

Content Objective: I can find the area of a composite figure by decomposing it into basic shapes, including a regular polygon split into triangles, and adding or subtracting the areas.

Language Objective: I can explain my steps using the words composite figure, decompose, add, and subtract.

📖 See **Learn It** for the explanation and worked examples, and the **Vocab** tab for the words. These are your notes to fill in and keep.

✏️ **Fill in each blank as we go. Use the Word Bank to help you.**

📚 **WORD BANK — FILL EACH BLANK WITH THE BEST WORD**

Composite Figure · **Decompose** · **Add** · **Subtract** · **Formula** · **Regular polygon** · **Congruent**

1. A shape made of two or more basic shapes combined is a _____.

2. To break a composite figure into basic shapes is to _____ it.

3. To find the total area of separate parts, I _____ their areas.

4. To find the area of a shape with a piece removed, I _____ the missing part's area.

5. A math rule written with symbols is a _____.

6. A shape with all sides and all angles equal is a _____.

7. Shapes that are exactly the same size and shape are _____.

Write About the Math

How much will the carpet cost?
¿Cuánto costará la alfombra?

Say your answer to a partner first. Then write it, using at least two of these words:

- ☐ **Composite Figure** — *Figura compuesta*
- ☐ **Decompose** — *Descomponer*
- ☐ **Add** — *Sumar*
- ☐ **Subtract** — *Restar*
- ☐ **Formula** — *Fórmula*

Model: *We decompose the L-shape because we already know how to find a rectangle's area.* — Students explain that the L-shape is hard to measure directly, so breaking it into two rectangles lets them use A = l x w on each piece and add the results.

Start

Complete the frames. Use the word bank.

Completa las oraciones. Usa el banco de palabras.

- **The top area is ___ sq ft and the stem area is ___ sq ft. Total = ___ + ___ = ___ sq ft. Cost = ___ x $5 = $___.**
- **My answer is ___ because ___.**
  Mi respuesta es ___ porque ___.

Build

Write two connected sentences. Use because, so, or but.

Escribe dos oraciones conectadas. Usa porque, entonces o pero.

- **My claim is ___.**
  Mi afirmación es ___.
- **My evidence is ___, so ___.**
  Mi evidencia es ___, entonces ___.

Explain

Write a claim, give math evidence, and explain your reasoning.

Escribe una afirmación, da evidencia matemática y explica tu razonamiento.

- [ ] I answered the question.
- [ ] I used math evidence: numbers, an equation, or a model.
- [ ] I used at least two math words.

Writing Guide — Teacher Copy

- The answer to the math question is correct.
- The evidence is real lesson mathematics (numbers, equation, or model), not restated claim.
- The support level changed the language scaffolding, never the mathematical expectation.

Answer Key & Teacher Guide

1. **Notes 1:** Composite Figure
2. **Notes 2:** Decompose
3. **Notes 3:** Add
4. **Notes 4:** Subtract
5. **Notes 5:** Formula
6. **Notes 6:** Regular polygon
7. **Notes 7:** Congruent

8. **Watch for this mistake:** *A common mistake in Area of Composite Figures is adding every piece even when a piece has been cut out of the figure. For a 10 ft by 8 ft rectangle with a 3 ft by 2 ft rectangular notch cut from one corner, students compute the full rectangle 10 × 8 = 80 sq ft and stop, or they add the notch instead of removing it (80 + 6 = 86 sq ft) instead of subtracting it: 80 – (3 × 2) = 80 – 6 = 74 sq ft. Before submitting, check whether each piece is part of the figure (add it) or missing from the figure (subtract it).*
9. **Try It 1:** D. 75 sq ft — *First rectangle = 9 x 6 = 54 sq ft. Second rectangle = 7 x 3 = 21 sq ft. Joined L-shape, so add: 54 + 21 = 75 sq ft.*
10. **Try It 2:** B. 172 sq ft — *Large rectangle = 16 x 12 = 192 sq ft. Cutout closet = 5 x 4 = 20 sq ft. A piece is removed, so subtract: 192 - 20 = 172 sq ft.*
