UNIT 5 · STANDARD 6.GR.4

Determine Surface Area of Prisms

Lesson 5-7 · Teacher Copy

Name: _____ **Date:** _____ **Class:** _____

My Notes

Level 2 Standard

🎯 **TODAY'S OBJECTIVES**

Content Objective: I can find the surface area of rectangular and triangular prisms.

Language Objective: I can explain my work using the words surface area, rectangular prism, triangular prism, and face.

📖 See **Learn It** for the explanation and worked examples, and the **Vocab** tab for the words. These are your notes to fill in and keep.

✏️ **Fill in each blank as we go. Use the Word Bank to help you.**

📚 **WORD BANK — FILL EACH BLANK WITH THE BEST WORD**

Surface area · **Rectangular prism** · **Triangular prism** · **Face** · **Net** · **Lateral face** · **Congruent**

1. The total area of all the faces of a solid is its _____.

2. A solid with six rectangular faces is a _____.

3. A solid with two triangular faces and three rectangular faces is a _____.

4. A flat surface of a solid figure is a _____.

5. A flat pattern that folds into a solid is a _____.

6. A side face of a prism that is not a base is a _____.

7. Faces that are exactly the same size and shape are _____.

Write About the Math

How much surface area needs staining, and how many cans of stain are needed?
¿Cuánta área de superficie hay que teñir, y cuántas latas de tinte se necesitan?

Say your answer to a partner first. Then write it, using at least two of these words:

- ☐ **Surface area** — *Área de superficie*
- ☐ **Rectangular prism** — *Prisma rectangular*
- ☐ **Triangular prism** — *Prisma triangular*
- ☐ **Face** — *Cara*
- ☐ **Net** — *Plantilla (desarrollo plano)*

Model: *For both, you add the areas of all the faces, but the shapes and number of faces differ.* — Students explain both methods add up all face areas, but a rectangular prism has 6 rectangular faces while a triangular prism has 5 faces (2 triangles + 3 rectangles).

Start

Complete the frames. Use the word bank.

Completa las oraciones. Usa el banco de palabras.

- **The chest's SA is ___ ft² because SA = 2(___×___) + 2(___×___) + 2(___×___) = ___ + ___ + ___ = ___. You need ___ can(s) because ___ ÷ 50 = ___.**
- **My answer is ___ because ___.**
  Mi respuesta es ___ porque ___.

Build

Write two connected sentences. Use because, so, or but.

Escribe dos oraciones conectadas. Usa porque, entonces o pero.

- **My claim is ___.**
  Mi afirmación es ___.
- **My evidence is ___, so ___.**
  Mi evidencia es ___, entonces ___.

Explain

Write a claim, give math evidence, and explain your reasoning.

Escribe una afirmación, da evidencia matemática y explica tu razonamiento.

- [ ] I answered the question.
- [ ] I used math evidence: numbers, an equation, or a model.
- [ ] I used at least two math words.

Writing Guide — Teacher Copy

- The answer to the math question is correct.
- The evidence is real lesson mathematics (numbers, equation, or model), not restated claim.
- The support level changed the language scaffolding, never the mathematical expectation.

Answer Key & Teacher Guide

1. **Notes 1:** Surface area
2. **Notes 2:** Rectangular prism
3. **Notes 3:** Triangular prism
4. **Notes 4:** Face
5. **Notes 5:** Net
6. **Notes 6:** Lateral face
7. **Notes 7:** Congruent

8. **Watch for this mistake:** *A common mistake in Surface Area of Prisms is confusing surface area with volume — multiplying l × w × h (which finds the space INSIDE the prism, in cubic units) instead of adding the areas of all the faces (SA = 2lw + 2lh + 2wh, in square units). A second common slip is forgetting to double one face pair, like writing 2(l×w) + 2(l×h) + (w×h) instead of + 2(w×h) — always count all 6 faces (or all 5 for a triangular prism) before you submit.*
9. **Try It 1:** C. 288 in² — *Two triangle ends: 2 × (½ × 8 × 6) = 48 in². Three rectangles: (8 + 6 + 10) × 10 = 24 × 10 = 240 in². SA = 48 + 240 = 288 in².*
10. **Try It 2:** — *A net shows every face laid out flat, so folding it up proves that surface area is just the sum of the areas of all the shapes on the net.*
