UNIT 6 · STANDARD 6.AT.7

Generate Equivalent Expressions

Lesson 6-8 · Teacher Copy

Name: _____ **Date:** _____ **Class:** _____

My Notes

Level 3 Enrichment

🎯 **TODAY'S OBJECTIVES**

Content Objective: I can use the commutative, associative, and identity properties to rewrite expressions.

Language Objective: I can explain my reasoning using the words commutative property, associative property, and identity property.

📖 See **Learn It** for the explanation and worked examples, and the **Vocab** tab for the words. These are your notes to fill in and keep.

✏️ **Fill in each blank as we go. Use the Word Bank to help you.**

📚 **WORD BANK — FILL EACH BLANK WITH THE BEST WORD**

Properties of Operations | **Commutative Property** | **Associative Property** | **Identity Property** | **Property** | **Distributive Property** | **Equivalent expressions** | **Expand** | **Factor an expression**

Level 3: try the blanks from memory first, then check the bank.

1. Rules that let you reorder or regroup without changing the _____.

2. The rule that order does not change a sum or product, like a + b = b + a, is the _____.

3. The rule that grouping does not change a sum or product, like (a + b) + c = a + (b + c), is the _____.

4. The rule that adding 0 or multiplying by 1 keeps a number the same is the _____.

5. A rule that is always true in math is a _____.

6. The rule that lets you multiply a number across a sum, like a(b + c) = a × b + a × c, is the _____.

7. Expressions that always have the same value are _____.

8. Writing 6(3x + 4) as 18x + 24 is called _____ the expression.

9. Writing 18x + 24 as 6(3x + 4) is called _____.

Write About the Math

What properties did the engineer use, and why does rearranging make the calculation easier?
¿Qué propiedades usó la ingeniera, y por qué reacomodar hace más fácil el cálculo?

Say your answer to a partner first. Then write it, using at least two of these words:

- [ ] **Properties of Operations**
  Propiedades de las operaciones
- [ ] **Commutative Property**
  Propiedad conmutativa
- [ ] **Associative Property**
  Propiedad asociativa
- [ ] **Identity Property**
  Propiedad de identidad
- [ ] **Property**
  Propiedad

Model: *The commutative property lets you change the order of a sum without changing the total.* — Students name the commutative property and explain that 3 + 5 + 2 gives 10 in any order because reordering addends does not change the sum.

Start

Complete the frames. Use the word bank.

Completa las oraciones. Usa el banco de palabras.

- **The engineer used the ___ property to change the ___ and the ___ property to change the ___. This makes it easier because 4 × 25 = ___, which is a friendly number to multiply by.**
- **My answer is ___ because ___.**
  Mi respuesta es ___ porque ___.

Build

Write two connected sentences. Use because, so, or but.

Escribe dos oraciones conectadas. Usa porque, entonces o pero.

- **My claim is ___.**
  Mi afirmación es ___.
- **My evidence is ___, so ___.**
  Mi evidencia es ___, entonces ___.

Explain

Write a claim, give math evidence, and explain your reasoning.

Escribe una afirmación, da evidencia matemática y explica tu razonamiento.

- [ ] I answered the question.
- [ ] I used math evidence: numbers, an equation, or a model.
- [ ] I used at least two math words.

Writing Guide — Teacher Copy

- The answer to the math question is correct.
- The evidence is real lesson mathematics (numbers, equation, or model), not restated claim.

- The support level changed the language scaffolding, never the mathematical expectation.

Answer Key & Teacher Guide

1. **Notes 1:** Properties of Operations
2. **Notes 2:** Commutative Property
3. **Notes 3:** Associative Property
4. **Notes 4:** Identity Property
5. **Notes 5:** Property
6. **Notes 6:** Distributive Property
7. **Notes 7:** Equivalent expressions
8. **Notes 8:** Expand
9. **Notes 9:** Factor an expression
10. **Watch for this mistake:** *A common mistake in Properties of Operations is applying the commutative property where it does not belong, or confusing it with the associative property. Students often assume 15 − 8 = 8 − 15 (it does not: 7 ≠ −7 — commutative only works for addition and multiplication), or they see parentheses move and call it "associative" even when the numbers inside just swapped places, like (2 + 3) + 4 = (3 + 2) + 4 (that is commutative — the order inside the parentheses changed, not the grouping). Before you label a property, ask: did only the order change (commutative), did only the grouping change (associative), or was a 0 or 1 involved (identity)?*
11. **Try It 1:** C. Associative Property — *The grouping (parentheses) changed but the order of the numbers stayed the same, so this is the Associative Property.*
12. **Try It 2:** D. Identity Property — *Multiplying by 1 keeps the same value, so this is the Identity Property of Multiplication.*
