Math is Finding Patterns

Find a pattern rule and use a table of values to check your answers.

Name _____ **Date** _____

Tonight's spark

A jar label says 100 dimes. Each dime is worth $0.10. How much money is in the jar?

Make a guess first: more or less than $5?

Dimes	Value
1	$0.10
2	$0.20
3	$0.30
100	?

Our class model: the pattern rule

Try it

Work it out on paper. Write one answer on each line.

1 **What is the value of one nickel?**

A. $0.01 **B.** $0.05 **C.** $0.10 **D.** $0.25

My answer _____

2 **What is the value of 10 dimes?**

A. $10.00 **B.** $0.10 **C.** $0.20 **D.** $1.00

My answer _____

3 **A table shows 1 → 5, 2 → 10, 3 → 15. What is the pattern rule?**

A. Multiply the number by 5 **B.** Add 4 to the number **C.** Add 5 to the number
D. Multiply the number by 15

My answer _____

4 **Using the rule 'multiply by 5', what is the output for 7?**

A. 12 **B.** 75 **C.** 35 **D.** 57

My answer _____

5 **Each quarter is worth $0.25. What are 4 quarters worth?**

A. $0.29 **B.** $1.00 **C.** $10.00 **D.** $4.25

My answer _____

Talk about it

What do you do to the number of coins to get their total value?

Home mission

Gather any coins and pull out the dimes. Count them. Ask your student to use the pattern rule to say what the dimes are worth. Then count by 10 cents to check.

If we get stuck, ask

- What changes from one row to the next?
- Can you say the rule as a sentence?
- Does that answer seem reasonable?

Do it on a screen
Scan or type the link. Same lesson, with hints.
