Answers and talk notes

Review Before Unit 1

What your student is learning

Tonight we review everything from Pre-Unit 1: estimating with reasoning, a fraction of a number, decimal operations, the volume of a box, and pattern rules.

Answers

Ask your student to explain before you look.

1. **B.** 42. 7 rows of about 6 cookies is 7 × 6 = 42 cookies.
2. **D.** 12. 18 ÷ 3 = 6 is one third. Two thirds is 2 × 6 = 12.
3. **A.** $4.00. 5 × $0.80 = $4.00, because 5 × 80 cents = 400 cents.
4. **C.** 60 cubic inches. 4 × 3 × 5 = 60 cubic inches.
5. **B.** 36. 9 × 4 = 36.
6. **C.** $2.50. $10.00 ÷ 4 = $2.50 for one ticket, because 4 × $2.50 = $10.00.

Talk about it

Which idea did you pick, and how do you know your answer is reasonable?

Home mission

Find a cereal box and a snack box. Measure each one in whole inches: length, width and height. Multiply the three numbers for each. Which box holds more? Ask your student to say it as an argument, with numbers and cubic inches.

When they are stuck, ask

- What is this problem actually asking for — an estimate, a part of something, a volume, or a rule?
- What can we count for sure? Let's start there.
- Could you draw it, or put it in a table?

Try not to say

- Just estimate it, it does not have to be right.
- Volume and area are basically the same thing.
- You found the rule for the first two, so that is the rule.
