Math is Everywhere — Homework

Lesson 10-1 • Standard MPP.3

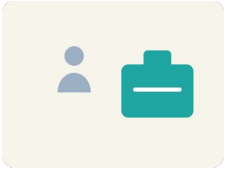

Name: _____ **Period:** _____ **Date:** _____

Today's Goals

Content: I can find applications of math outside of school — in professions like being a chef, in hobbies like gardening, and around my own house.

Language: I can describe how someone uses math at work using the words plan, calculate, and measure.

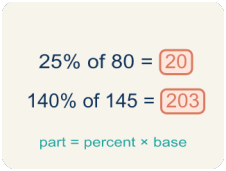

Key Words

profession (profesión) — A job someone is trained to do, like chef, nurse, or carpenter.

inventory (inventario) — The supply of items a business keeps on hand, tracked by counting.

portion (porción) — The measured amount of food served to one person.

area (área) — The amount of flat space a surface covers, measured in square units.

volume (volumen) — The amount of space something fills, measured in cubic units.

Practice

Show your work. Use the blank space under each problem.

1. A planter is 4 feet long and 2 feet wide. What is its area?

A. 2 square feet
B. 6 square feet
C. 8 square feet
D. 12 square feet

---

2. That same planter is 4 feet long, 2 feet wide, and needs soil 1 foot deep. How much soil does the gardener need?

A. 4 cubic feet

B. 7 cubic feet
C. 8 cubic feet
D. 8 square feet

---

3. One person saves 8 gallons of water a day by turning the water on only to rinse. How much water does that person save in a year (365 days)?

A. 365 gallons
B. 373 gallons
C. 1,460 gallons
D. 2,920 gallons

---

4. If each person in a house saves 2,920 gallons a year, how much does a household of 3 people save in a year?

A. 973 gallons
B. 2,923 gallons
C. 5,840 gallons
D. 8,760 gallons

---

5. A household of 5 saves 2,920 gallons per person per year. A household of 4 does the same. How much MORE does the household of 5 save than the household of 4?

A. 1 gallon
B. 2,920 gallons
C. 11,680 gallons
D. 14,600 gallons

---

6. Choose another person who works in a restaurant — not the chef — and describe the math they would use.

---

7. A gardener's planter has an area of 8 square feet, and each plant needs 2 square feet of space to grow. How many plants fit in the planter?

A. 4 plants
B. 6 plants
C. 10 plants
D. 16 plants

---

8. What factors do you consider to determine the number of plants you can put in a planter garden? Is the TYPE of plant a factor? Explain your thinking.

---

9. Which statement matches this lesson's big idea?

A. Math is just a school subject with little relevance outside the classroom
B. Only professions like chef use math; hobbies do not
C. Math is everywhere — in professions, hobbies, and problems around your house

D. Math is only useful for people who work with money

---

10. Each person who rinses instead of running water saves 8 gallons a day. Complete the table.

People in the house	Thinking	Gallons saved per day
3	3 × 8	
5	5 × 8	
8	8 × 8
