Add and Subtract Decimals

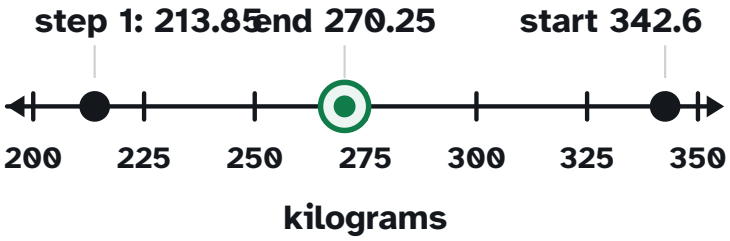
Add and subtract decimals in several steps, keeping a running total.

Name _____ **Date** _____

Tonight's spark

A cargo scale reads 342.6 kg. The crew unloads 128.75 kg of food, then loads 56.4 kg of samples. What does the scale read now?

Guess first: will the scale read more or less than 342.6 kg at the end?



Our class model: the running log

Try it

Work it out on paper. Write one answer on each line.

1. **A scale reads 150 kg. The crew unloads 15.5 kg. Which calculation finds the new reading?**

   A. Add **B.** Subtract **C.** Multiply **D.** Divide

   My answer _____

2. **To add 25.3 and 4.75, how should you write the numbers?**

   A. 25.3 and 4.75, with the right edges lined up **B.** 253 and 475, with no decimal points

   C. 25.30 and 4.75, with the decimal points lined up

   D. 25.3 and 4.75, with the left edges lined up

   My answer _____

3 **What is 50.2 – 18.75?**

A. 31.55 **B.** 32.55 **C.** 68.95 **D.** 31.45

My answer _____

4 **A scale reads 120.5 kg. The crew unloads 40.25 kg, then loads 15.5 kg. What is the final reading?**

A. 64.75 kg **B.** 95.75 kg **C.** 176.25 kg **D.** 80.25 kg

My answer _____

5 **A scale reads 200 kg. The crew unloads 75.5 kg, then loads 20.25 kg. What is the final reading?**

A. 144.75 kg **B.** 104.25 kg **C.** 255.25 kg **D.** 295.75 kg

My answer _____

Talk about it

For each step, did the balance go up or down, and how did you line up the numbers?

Home mission

Pick a bag of rice or flour at home. Say it weighs 4.5 kg. Pretend you use 1.25 kg, then add 0.8 kg. Write a running log with the decimal points in a line.

If we get stuck, ask

- Are the decimal points lined up in a straight column?
- Does this step add to the total or take away from it?
- Is the answer bigger or smaller than where we started? Should it be?

Do it on a screen

Scan or type the link. Same lesson, with hints.
