Describe the Data Using the Median

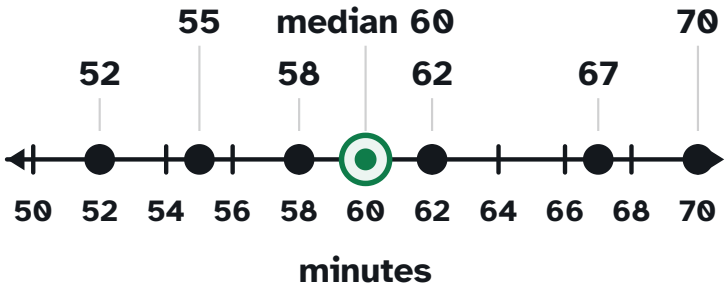

Find the median when a data set has an even number of values.

Name _____ **Date** _____

Tonight's spark

A trail sign wants one number for a typical bike ride. Six rides lasted 52, 67, 58, 62, 55 and 70 minutes. What number should the sign show?

Make a guess first: will it be one of the six ride times, or not?

Our class model: halfway between the two middle numbers

Try it

Work it out on paper. Write one answer on each line.

1. **What is the median of 4 and 8?**

   A. 4 **B.** 6 **C.** 12 **D.** 8

   My answer _____

2. **What is the median of 1, 3, 7, 13?**

   A. 3 **B.** 7 **C.** 5 **D.** 6

   My answer _____

3. **What is the median of 9, 3, 7, 5?**

   A. 5 **B.** 8 **C.** 12 **D.** 6

   My answer _____

4 **Can the median of an even number of values be a number that is not in the data?**

A. Yes, it can fall halfway between two values

B. No, the median is always one of the data values

C. No, the median is always a whole number **D.** Only if all the values are equal

My answer _____

5 **What is the median of 10, 12, 16, 18, 20, 30?**

A. 34 **B.** 17 **C.** 16 **D.** 18

My answer _____

6 **Six dogs weigh 40, 52, 38, 44, 60, 46 pounds. What is the median weight?**

A. 44 lb **B.** 46 lb **C.** 45 lb **D.** 90 lb

My answer _____

Talk about it

Why are there two middle numbers, and how did you find the number halfway between them?

Home mission

Write 52, 55, 58, 62, 67 and 70 on six small papers and mix them up. Ask your student to put them in order and touch the two middle ones. Then ask: what number is halfway between them? Is there a paper with that number?

If we get stuck, ask

- Is the list in order from least to greatest yet?
- How many values are there — odd or even?
- Which two numbers share the middle, and what is halfway between them?

Do it on a screen

Scan or type the link. Same lesson, with hints.
