Understand Rates and Unit Rates

Find each unit price as a fraction over 1 and pick the better buy.

Name _____ **Date** _____

Tonight's spark

At the corner store, Bag C of rice holds 3 pounds for $5.55. Bag D holds 5 pounds for $8.75. Bag C costs less in total. Is Bag C the better buy?

Make a guess first: does the lower total always mean the lower price per pound?

Cost	Pounds	
$5.55	3	÷3
?	1	
$8.75	5	÷5
?	1	

Our class model: cost over amount, divided to 1

Try it

Work it out on paper. Write one answer on each line.

1 **Bag A holds 4 pounds and costs $7. Which fraction has the total cost on top?**

A. 4 lb over $7 **B.** $7 over 4 lb **C.** $7 over $4 **D.** 4 lb over 4 lb

My answer _____

2 **Divide the top and bottom of $9 / 3 lb by 3. What is the result?**

A. $3 / 1 lb **B.** $12 / 6 lb **C.** $27 / 9 lb **D.** $9 / 1 lb

My answer _____

3 **A bag has 5 pounds of rice for $10.00. What is the price for 1 pound?**

A. $0.50 **B.** $5.00 **C.** $15.00 **D.** $2.00

My answer _____

4 **Bag A costs $1.75 per pound. Bag B costs $1.60 per pound. Which is the better buy?**

A. Bag A, because $1.75 is more **B.** They cost the same **C.** Bag B, because $1.60 is less

My answer _____

5 **Cereal costs $12 for 3 boxes. Divide to find the price for 1 box.**

A. $36 **B.** $4 **C.** $9 **D.** $15

My answer _____

Talk about it

Which option has the lower price for 1 apple, and how do you know?

Home mission

Find two sizes of the same food, like two bags of rice. Read each price and weight. Can your student say each price for 1 pound out loud? Which bag is the better buy?

If we get stuck, ask

- Write the rate as a fraction with cost on TOP and pounds on the BOTTOM. Now divide both parts by the bottom number.
- Write the unit rate in fraction form over 1 (like 1.75 / 1 lb).
- Which unit price is lower?

Do it on a screen

Scan or type the link. Same lesson, with hints.
