Understand Rates and Unit Rates

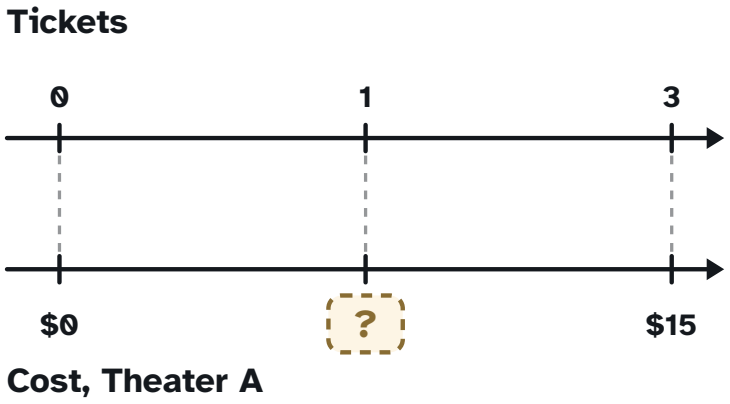
Write each comparison as a fraction, divide to a unit rate, and pick the better value.

Name _____ **Date** _____

Tonight's spark

Theater A sells 3 tickets for $15. Theater B sells 5 tickets for $20. A friend says A is cheaper because $15 is less than $20. Which theater is the better value?

Make a guess first: does the lower total mean the lower price for one ticket?



Our class model: the unit rate over 1

Try it

Work it out on paper. Write one answer on each line.

1 **Which fraction shows $20 for 5 tickets, with the cost on top?**

A. 5 tickets / $20 **B.** $5 / 20 tickets **C.** $20 / 5 tickets **D.** $20 / $5

My answer _____

2 **A pool charges $24 for 6 visits. What is the cost per visit?**

A. $18 **B.** $144 **C.** $30 **D.** $4

My answer _____

3 **A runner goes 12 laps in 4 minutes. How many laps is that per minute?**

A. 8 **B.** 16 **C.** 3 **D.** 48

My answer _____

4 **Station Y sells 4 gallons of fuel for $18. What is the unit rate in dollars per gallon?**

A. $4.50 **B.** $14.00 **C.** $22.00 **D.** $72.00

My answer _____

5 **Theater A costs $5 per ticket. Theater B costs $4 per ticket. Which is the better value?**

A. Theater A, because $5 is the greater amount **B.** Theater B, because $4 is the lower rate

C. They are the same value

My answer _____

6 **Plan X is $30 for 10 gigabytes. Plan Y is $56 for 14 gigabytes. Which plan costs less per gigabyte?**

A. Plan Y, because it has more gigabytes **B.** Plan Y, $4 per gigabyte

C. Plan X, $3 per gigabyte **D.** They cost the same per gigabyte

My answer _____

Talk about it

Which pass has the lower unit rate, and why does that make it the better value?

Home mission

Look at two snack packs at home. Read the price and the count on each. Can your student say the cost of ONE in each pack? Does the lower total always win?

If we get stuck, ask

- Which number goes on TOP of the fraction: the money or the amount?
- Now divide both parts by the bottom number. What is the unit rate over 1?
- State the unit rate in fraction form over 1 (like $5/1 item = $5 per item).

Do it on a screen

Scan or type the link. Same lesson, with hints.
