Answers and talk notes

Relate Fractions, Decimals, and Percentages

What your student is learning

Tonight we put fractions, decimals, and percents in order — by first rewriting them all in ONE form.

Answers

Ask your student to explain before you look.

1. **B.** Rewrite them all in one form, like percent. Rewrite them all in one form, like percent. Then you can compare them directly.
2. **D.** 50%. 0.5 is 50 hundredths, so it is 50%.
3. **A.** 80%. 4/5 = 80/100 (multiply both by 20), so it is 80%.
4. **C.** 0.4, because 0.4 is 40% and 40% is greater than 35%. 0.4, because 0.4 is 40% and 40% is greater than 35%.
5. **B.** 0.2, 25%, 1/2. As percents: 0.2 = 20%, 25%, and 1/2 = 50%. From least to greatest: 0.2, 25%, 1/2.
6. **D.** 3/5, 65%, 0.7. As percents: 0.7 = 70%, 3/5 = 60%, and 65%. From least to greatest: 3/5, 65%, 0.7.

Talk about it

What common form did you pick, and what order did you get?

Home mission

Pretend three players have these records: 0.8, 7/10, and 75%. Ask your student which form to use for all three. Who has the best record?

When they are stuck, ask

- Which one form will you write all of them in?
- What does this fraction become out of 100?
- Are they all in the same form yet? Then compare.

Try not to say

- 3/5 is 35%, just read the digits.
- Compare them as they are, you can tell by looking.
- A fraction is always smaller than a decimal.
