Find and Compare with Percentages

Compare two part-to-whole scores fairly by turning each one into a percent.

Name _____ **Date** _____

Tonight's spark

A class chart shows two quizzes. Quiz 1 is 21 out of 25. Quiz 2 is 16 out of 20. Which quiz went better?

Make a guess first: which quiz had the higher percent?

Right	Total	
21	25	
84	100	× 4
16	20	
80	100	× 5

Our class model: scale the whole to 100

Try it

Work it out on paper. Write one answer on each line.

1 **What is 50% of 30?**

A. 60 **B.** 3 **C.** 30 **D.** 15

My answer _____

2 **What is 75% of 40?**

A. 10 **B.** 30 **C.** 160

My answer _____

3 **Scale 21/25 to a fraction out of 100.**

A. 84/100 **B.** 21/100 **C.** 25/100 **D.** 46/100

My answer _____

4 **Write 9 out of 10 as a percent.**

A. 9% **B.** 19% **C.** 90% **D.** 10%

My answer _____

5 **Score A is 16 out of 20. Score B is 4 out of 5. Which statement is true?**

A. Score A is higher because 16 is bigger than 4

B. Score B is higher because 5 is smaller than 20

C. Score A is lower because 20 is bigger than 5 **D.** The scores are equal: both are 80%

My answer _____

Talk about it

Why can't we compare the two scores just by looking at the top numbers?

Home mission

Make up two quiz scores with different totals, like 7 out of 10 and 12 out of 20. Can your student scale both to 100 and say which is better?

If we get stuck, ask

- A percent of WHAT? What is the whole for each one?
- Can we write both of these out of 100?
- Now that the wholes match, which is greater?

Do it on a screen

Scan or type the link. Same lesson, with hints.
