Fraction Division Practice

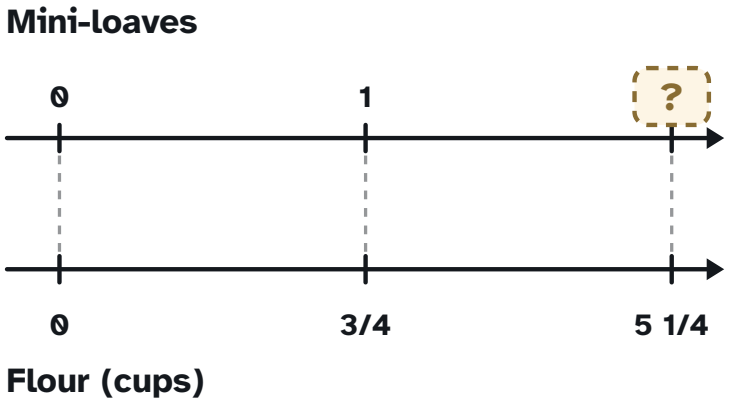
Divide a mixed number by a fraction by changing it to a fraction first.

Name _____ **Date** _____

Tonight's spark

A bakery has 5 1/4 cups of flour. Each mini-loaf needs 3/4 cup. How many mini-loaves can the baker make?

Make a guess first: more than 5 mini-loaves, or fewer?



Our class model: convert, then flip

Try it

Work it out on paper. Write one answer on each line.

1 **Write 2 3/5 as an improper fraction.**

A. 6/5 **B.** 10/5 **C.** 13/5 **D.** 23/5

My answer _____

2 **To work out 2 1/2 ÷ 3/4, what should you do first?**

A. Turn 2 1/2 into 5/2 **B.** Flip 2 1/2 as it is **C.** Subtract 3/4 from 2 1/2

D. Multiply 2 1/2 by 3/4

My answer _____

3 **Which is the same as 9/2 ÷ 3/4?**

A. 9/2 × 3/4 **B.** 2/9 × 4/3 **C.** 9/2 ÷ 4/3 **D.** 9/2 × 4/3

My answer _____

4 **What is 9 ÷ 3/4?**

A. 27/4 **B.** 12 **C.** 1/12 **D.** 6

My answer _____

5 **What is 1 1/2 ÷ 3/4?**

A. 2 **B.** 9/8 **C.** 1/2 **D.** 3

My answer _____

Talk about it

How did you change the mixed number into a fraction, and how many groups did you circle?

Home mission

Pretend 21 coins or beans are the quarter-cups in 5 1/4 cups of flour. Each mini-loaf takes 3 of them. Make groups of 3. How many loaves? Say why 21 quarters equal 5 1/4 cups.

If we get stuck, ask

- Is every number in this problem a fraction yet?
- How do we turn a mixed number into a fraction?
- Which fraction do we flip?

Do it on a screen

Scan or type the link. Same lesson, with hints.
