Answers and talk notes

Fraction Division Practice

What your student is learning

Tonight we review dividing with fractions from Lessons 6.1 and 6.2 — whole numbers, fractions divided by fractions, and mixed numbers.

Answers

Ask your student to explain before you look.

1. **A.** 8/3. The reciprocal of 3/8 is 8/3. Swap the top and bottom numbers.
2. **C.** 2/3 ÷ 1/6. 2/3 ÷ 1/6 asks how many 1/6s fit in 2/3. The total goes first and the piece size is the divisor.
3. **B.** 12. 6 ÷ 1/2 = 12. Each whole holds 2 halves, and 6 × 2 = 12.
4. **D.** 13/4. 3 1/4 = 13/4, because 3 × 4 = 12 and 12 + 1 = 13 fourths.
5. **B.** 2. 3/5 ÷ 3/10 = 3/5 × 10/3 = 30/15 = 2.
6. **C.** 7. 2 1/3 = 7/3, so 7/3 ÷ 1/3 = 7/3 × 3/1 = 7.

Talk about it

Which number did you flip, and is the answer bigger or smaller than 1 1/2?

Home mission

Cut a paper strip and call it 1 yard. Fold it into 4 equal parts and mark 3 of them. Now fold the whole strip into 8 equal parts. How many 1/8 pieces fit in the 3/4 you marked?

When they are stuck, ask

- Which number do we flip — the first or the second?
- How many of the small pieces fit inside the big one? Let's picture it.
- Should the answer be bigger or smaller than what we started with? Why?

Try not to say

- Just divide the tops and the bottoms straight across.
- Flip the first fraction instead of the second.
- Start Keep-Change-Flip while it is still a mixed number.
