Divide Mixed Numbers

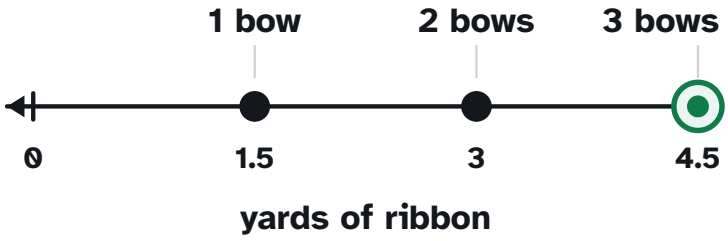
Solve a real cutting problem by dividing mixed numbers after converting both.

Name _____ **Date** _____

Tonight's spark

A craft store sells ribbon by the yard. A shopper buys 4 1/2 yards. Each bow uses 1 1/2 yards. How many bows can she make?

Guess first: will she make more than 4 bows, or fewer?



Our class model: convert both numbers first

Try it

Work it out on paper. Write one answer on each line.

1 **To find 3 1/4 ÷ 1/2, what should you do FIRST?**

A. Divide 3 by 1/2 and 1/4 by 1/2 separately **B.** Change 3 1/4 to an improper fraction
C. Flip 3 1/4 upside down **D.** Add 3 and 1/4 and 1/2

My answer _____

2 **A 5 1/4-foot rope is cut into 3/4-foot pieces. Which number sentence fits?**

A. 3/4 ÷ 5 1/4 **B.** 5 1/4 × 3/4 **C.** 5 1/4 – 3/4 **D.** 5 1/4 ÷ 3/4

My answer _____

3 **Find 2 1/2 ÷ 5/8.**

A. 1 9/16 **B.** 4 **C.** 3 1/8 **D.** 2

My answer _____

4 **Find 5 1/4 ÷ 3/4.**

A. 7 **B.** 3 15/16 **C.** 4 1/2

My answer _____

5 **A 3 3/4-foot pipe is cut into pieces that are each 1 1/4 feet long. How many pieces?**

A. 2 1/2 **B.** 4 11/16 **C.** 3 **D.** 5

My answer _____

6 **Which is the closest estimate for 8 1/2 ÷ 1/2?**

A. about 4 **B.** about 9 **C.** about 17

My answer _____

Talk about it

Did you change the mixed number into an improper fraction before dividing? How many pieces make sense?

Home mission

Cut a paper strip that is 6 inches long. Ask: how many pieces that are each 1 1/2 inches long can you cut? Guess first, then fold or cut to check.

If we get stuck, ask

- Is the mixed number a single fraction yet?
- How do we turn a mixed number into an improper fraction?
- How many of those pieces fit into the whole length?

Do it on a screen

Scan or type the link. Same lesson, with hints.
