Least Common Multiple

Use the least common multiple to solve a buying problem with none left over.

Name _____ **Date** _____

Tonight's spark

A cookout needs the same number of hot dogs and buns. Hot dogs come in packs of 6. Buns come in packs of 8. What is the fewest of each you can buy with none left over?

Guess first: is it more than 20 of each, or fewer?

Ticks: hot dogs by 6. Dots: buns by 8.

Our class model: the matching-packs LCM

Try it

Work it out on paper. Write one answer on each line.

1 **Which phrase in a buying problem tells you to find the LCM?**

A. the same number of each, none left over **B.** the biggest number that divides both
C. add the two pack sizes **D.** split into equal groups

My answer _____

2 **Stickers come in packs of 3 and cards come in packs of 5. What is the smallest number of each you can have so the counts match?**

A. 15 **B.** 8 **C.** 30 **D.** 1

My answer _____

3 **Juice boxes come in packs of 6 and straws come in packs of 8. The LCM is 24. How many packs of straws give 24 straws?**

A. 4 **B.** 3 **C.** 24

My answer _____

4 **Find the LCM of 8 and 12.**

A. 96 **B.** 4 **C.** 48 **D.** 24

My answer _____

5 **Pens come in packs of 6 and caps come in packs of 15. The LCM is 30. How many packs do you buy in all (pens and caps together)?**

A. 5 **B.** 30 **C.** 7

My answer _____

Talk about it

What is the smallest number where both packs come out even? How many packs of each is that?

Home mission

Line up cups in groups of 6 on one side and spoons in groups of 8 on the other. Keep adding groups until the totals match. Which total do you reach?

If we get stuck, ask

- What numbers can you reach counting by each pack size?
- What is the first number both can reach?
- Is that the number of items, or the number of packs?

Do it on a screen

Scan or type the link. Same lesson, with hints.
