Division Expressions with Fractions and Mixed Numbers

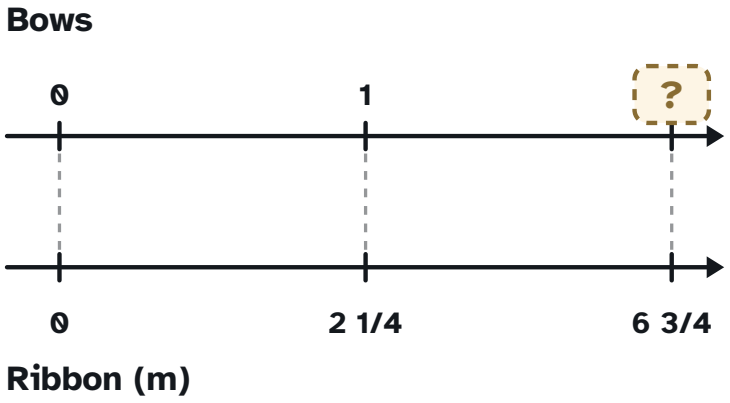
Divide one mixed number by another by changing both to fractions first.

Name _____ **Date** _____

Tonight's spark

A gift shop has a ribbon that is 6 3/4 meters long. Each bow uses 2 1/4 meters. How many bows can the shop make?

Make a guess first: more than 2 bows, or fewer?



Our class model: both to improper fractions

Try it

Work it out on paper. Write one answer on each line.

1. **Write 6 2/5 as an improper fraction.**

   A. 12/5 **B.** 32/5 **C.** 8/5 **D.** 62/5

   My answer _____

2. **Write 3 3/4 as an improper fraction.**

   A. 6/4 **B.** 9/4 **C.** 33/4 **D.** 15/4

   My answer _____

3 **To work out 5 1/2 ÷ 1 1/4, what should you do first?**

A. Write each mixed number as an improper fraction **B.** Flip 1 1/4 and leave 5 1/2 as it is

C. Subtract the whole numbers **D.** Divide 5 by 1 and 1/2 by 1/4

My answer _____

4 **What is 7/2 ÷ 7/4?**

A. 1/2 **B.** 49/8 **C.** 2

My answer _____

5 **What is 1 1/2 ÷ 2 1/4?**

A. 27/8 **B.** 2/3 **C.** 3/2

My answer _____

Talk about it

What are your two improper fractions, and how many pieces fit?

Home mission

Grab any string or ribbon and pretend it is 6 3/4 meters long, with 2 1/4 meters for each bow. Ask: about how many bows? Then count in quarters: how many quarters are in each length?

If we get stuck, ask

- Is every number a fraction yet?
- Which fraction gets flipped — the first or the second?
- How many groups of that size fit inside the total?

Do it on a screen

Scan or type the link. Same lesson, with hints.
