Write and Evaluate Algebraic Expressions

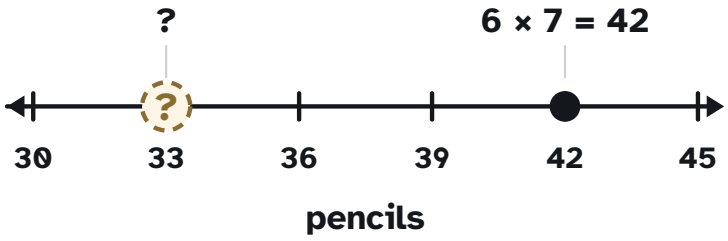
Put a number in for the letter, then find the value of an algebraic expression.

Name _____ **Date** _____

Tonight's spark

A school store sells packs of 6 pencils. A student buys b packs, then gives away 9 pencils. The pencils left are 6b − 9. If b = 7, how many pencils are left?

Make a guess first: are there more or fewer than 40 pencils left?



Our class model: substitute first, then calculate

Try it

Work it out on paper. Write one answer on each line.

1 **What does 5y mean?**

A. 5 × y **B.** 5 + y **C.** y^5 **D.** 5 and y side by side as digits

My answer _____

2 **To find the value of 4k when k = 3, which should you write?**

A. 4 + 3 **B.** 43 **C.** 4 × 3 **D.** 4 ÷ 3

My answer _____

3 **What is the value of x + 8 when x = 5?**

A. 3 **B.** 13 **C.** 40 **D.** 85

My answer _____

4 **What is the value of 3m when m = 6?**

A. 9 **B.** 36 **C.** 63 **D.** 18

My answer _____

5 **What is the value of 2n + 5 when n = 4?**

A. 13 **B.** 11 **C.** 29

My answer _____

6 **What is the value of 20 – 3w when w = 4?**

A. 68 **B.** 21 **C.** 8 **D.** 12

My answer _____

Talk about it

What did you put in place of the letter, and what did you do first after that?

Home mission

Put 6 coins in each of 4 cups. Take away 9 coins. Ask your student to say 6b – 9 with b = 4, then count the coins left to check.

If we get stuck, ask

- What number goes in for the letter?
- Can you rewrite the whole expression with the number in it?
- Now which operation comes first?

Do it on a screen

Scan or type the link. Same lesson, with hints.
