Find Factors and Multiples

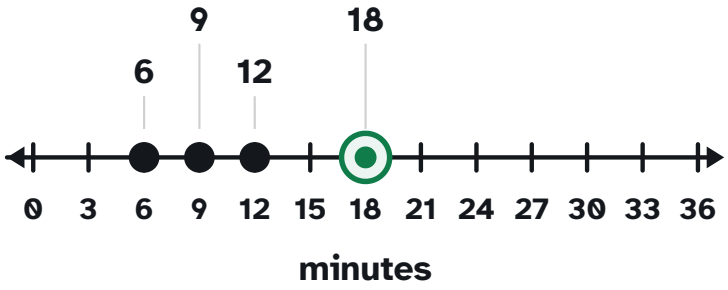
Find the least common multiple to tell when two repeating things happen together.

Name _____ **Date** _____

Tonight's spark

Two city buses leave the same stop at 8:00. One leaves every 6 minutes. The other leaves every 9 minutes. When do they leave together again?

Make a guess first: is it sooner than 10 minutes, or later?



Our class model: skip-count both lists, find the first match

Try it

Work it out on paper. Write one answer on each line.

1 **Which list shows the first four multiples of 5?**

A. 5, 6, 7, 8 **B.** 1, 5, 25, 125 **C.** 5, 10, 15, 20

My answer _____

2 **Which number is a multiple of both 3 and 4?**

A. 12 **B.** 8 **C.** 9 **D.** 7

My answer _____

3 **Multiples of 3: 3, 6, 9, 12, 15. Multiples of 5: 5, 10, 15, 20. What is the LCM of 3 and 5?**

A. 30 **B.** 8 **C.** 3 **D.** 15

My answer _____

4 **What is the LCM of 2 and 9?**

A. 11 **B.** 18 **C.** 9 **D.** 36

My answer _____

5 **What is the LCM of 6 and 10?**

A. 60 **B.** 16 **C.** 30 **D.** 2

My answer _____

6 **One bus leaves every 9 minutes and another every 12 minutes. They leave together at 8:00. After how many minutes do they leave together again?**

A. 36 **B.** 108 **C.** 21 **D.** 3

My answer _____

Talk about it

Which number is the first one in both lists? What does it tell you about when the two patterns meet?

Home mission

Skip-count out loud. Your student says every 3rd number and you say every 4th number. Which number do you both say first? That number is the LCM of 3 and 4.

If we get stuck, ask

- What numbers do you land on skip-counting by this one?
- What is the first number that shows up in both lists?
- Is this question about sharing into groups, or about repeating cycles?

Do it on a screen

Scan or type the link. Same lesson, with hints.
