Understand Equations and Their Solutions

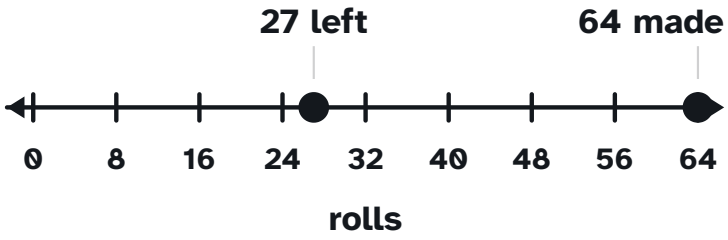
Write equations from words, then test and revise your guess.

Name _____ **Date** _____

Tonight's spark

A corner bakery made 64 rolls. Some were sold, and 27 are left. How many rolls were sold?

Make a guess first: were more than 30 rolls sold, or fewer?



Our class model: say it in words first

Try it

Work it out on paper. Write one answer on each line.

1 **Which phrase matches n + 8?**

A. a number divided by 8 **B.** a number increased by 8 **C.** 8 times a number
D. a number decreased by 8

My answer _____

2 **Which expression matches 'a number decreased by 8'?**

A. n – 8 **B.** 8 – n **C.** n + 8 **D.** 8 ÷ n

My answer _____

3 **Which equation says 'a number divided by 4 is 6'?**

A. 4 ÷ n = 6 **B.** n × 4 = 6 **C.** n ÷ 4 = 6 **D.** n – 4 = 6

My answer _____

4 **'Twice a number is 18.' Which equation matches?**

A. n + 2 = 18 **B.** n ÷ 2 = 18 **C.** n – 2 = 18 **D.** 2n = 18

My answer _____

5 **Jordan has $20 and spends m dollars on lunch. He has $13 left. Which equation shows this?**

A. 20 – m = 13 **B.** m – 20 = 13 **C.** 20 + m = 13 **D.** m ÷ 20 = 13

My answer _____

6 **Is n = 9 a solution of n – 4 = 5?**

A. No, because 9 – 4 = 13 **B.** No, because 9 is bigger than 5 **C.** Yes, because 9 – 4 = 5
D. Yes, because 9 + 4 = 5

My answer _____

Talk about it

What does your letter stand for? Which number comes first in the symbols, and why?

Home mission

Count out 12 spoons or coins. Hide some under a cup and leave 7 in view. Can your student write 12 – c = 7? Then lift the cup to test a guess.

If we get stuck, ask

- What are we trying to find? Give it a letter.
- Can you say the relationship in words before using symbols?
- Try a number. Was it too big or too small?

Do it on a screen

Scan or type the link. Same lesson, with hints.
