Write and Solve Equations Using Addition or Subtraction

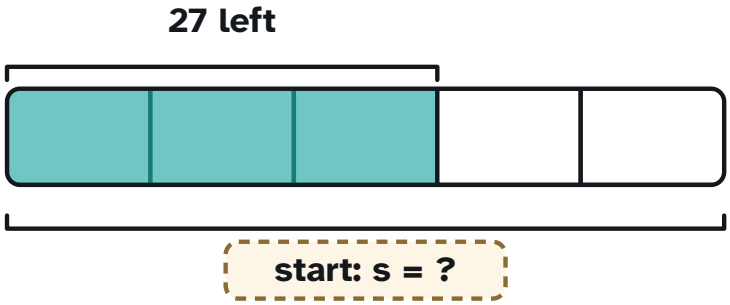
Solve equations that subtract by adding the same amount to both sides.

Name _____ **Date** _____

Tonight's spark

A corner store had some bags of chips on the shelf. Today it sold 18 bags. Now 27 bags are left. How many bags were on the shelf this morning?

Guess first: were there more than 27 bags, or fewer?



Our class model: adding back to undo subtracting

Try it

Work it out on paper. Write one answer on each line.

1 **What undoes subtracting 4?**

A. Adding 4 **B.** Subtracting 4 **C.** Multiplying by 4 **D.** Dividing by 4

My answer _____

2 **Solve: x – 5 = 3**

A. 2 **B.** 8 **C.** 15 **D.** 3

My answer _____

3 **Solve: n – 10 = 6**

A. 4 **B.** 60 **C.** 16

My answer _____

4 **Solve: k – 7 = 12**

A. 5 **B.** 84 **C.** 12 **D.** 19

My answer _____

5 **Is x = 20 a solution of x – 9 = 11?**

A. Yes, because 20 – 9 = 11 **B.** No, because 20 – 9 = 29

C. No, because 20 is bigger than 11 **D.** Yes, because 20 + 9 = 11

My answer _____

6 **Lena had some money. She spent $6 and has $9 left, so m – 6 = 9. How much did she start with?**

A. $3 **B.** $54 **C.** $15 **D.** $9

My answer _____

Talk about it

Why does adding undo the subtraction? What must you do to the other side?

Home mission

Fill a bowl with beans without counting. Take out 18 and count what is left. Say s – 18 = your count. Can your student find s? Pour them back to check.

If we get stuck, ask

- What operation do you see in the equation?
- What is the opposite of that operation?
- Did you do it to both sides?

Do it on a screen

Scan or type the link. Same lesson, with hints.
