Write and Solve Equations Using Multiplication or Division

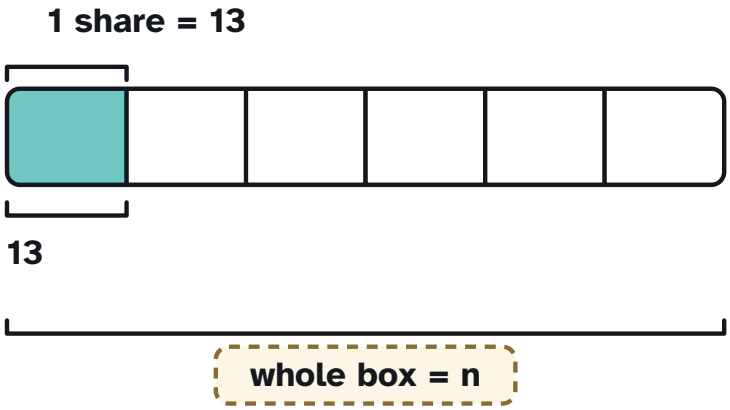
Solve equations where the letter is divided by multiplying both sides.

Name _____ **Date** _____

Tonight's spark

A torn supply receipt shows a box of pens shared evenly. Six club members each got 13 pens. The box total is torn off. How many pens were in the box?

Guess first: were there more than 50 pens in the box, or fewer?



Our class model: multiply to undo dividing

Try it

Work it out on paper. Write one answer on each line.

1 **What undoes dividing by 6?**

A. Dividing by 6 **B.** Subtracting 6 **C.** Multiplying by 6 **D.** Adding 6

My answer _____

2 **Solve: n ÷ 2 = 8**

A. 4 **B.** 6 **C.** 10 **D.** 16

My answer _____

3 **Solve: x ÷ 5 = 4**

A. 1 **B.** 20 **C.** 9

My answer _____

4 **Solve: m ÷ 3 = 7**

A. 21 **B.** 10 **C.** 4

My answer _____

5 **Which equation can be solved by multiplying both sides by 4?**

A. x + 4 = 9 **B.** x ÷ 4 = 9 **C.** 4x = 36 **D.** x – 4 = 9

My answer _____

Talk about it

Why do we multiply to undo dividing? What would go wrong if you divided by 4 again?

Home mission

Put the same number of beans in each of 6 cups, without counting out loud. Tell your student only how many are in one cup, such as 4. Can they say how many beans there are in all? Pour the cups together to check.

If we get stuck, ask

- Is the variable being multiplied or divided here?
- What is the opposite of that?
- What does your answer mean in the story?

Do it on a screen

Scan or type the link. Same lesson, with hints.
