UNIT 1 · STANDARD 6.NOS.2

Divide Multi-Digit Numbers

Lesson 1-4 · Teacher Copy

Name: _____

Date: _____

Class: _____

My Notes Level 3 Enrichment

TODAY'S OBJECTIVES

Content Objective: I can divide multi-digit whole numbers and explain the meaning of the quotient and remainder.

Language Objective: I can explain my division using the words dividend, divisor, quotient, and remainder.

See **Learn It** for the explanation and worked examples, and the **Vocab** tab for the words. These are your notes to fill in and keep.

Fill in each blank as we go. Use the Word Bank to help you.

WORD BANK — FILL EACH BLANK WITH THE BEST WORD

Dividend

Divisor

Quotient

Remainder

Partial quotients

Tap any word to see what it means and a picture.

Level 3: try the blanks from memory first, then check the bank.

1 In $84 \div 7$, the number 84 being divided is the .

2 In $84 \div 7$, the number 7 that we divide by is the .

3 The answer to a division problem is called the .

4 When a number does not divide evenly, the amount left over is the

.

5 Breaking division into easier chunks and adding the pieces uses

.

Reflect — Exit Ticket

What is $2,352 \div 16$?

- A. 147
- B. 137
- C. 157
- D. 146

Your answer:

Answer Key & Teacher Guide

1. **Notes 1:** Dividend
2. **Notes 2:** Divisor
3. **Notes 3:** Quotient
4. **Notes 4:** Remainder
5. **Notes 5:** Partial quotients
6. **Watch for this mistake:** *A common mistake in Divide Multi-Digit Numbers is skipping the key idea: "Subtract easy chunks of the divisor, then add up how many you took out to get the quotient." — always check your work against this rule before you submit.*
7. **Try It 1:** A. 704 — $7 \times 704 = 4,928$ exactly, so the quotient is 704 with no remainder.
8. **Try It 2:** A. 671 R 6 — $9 \times 671 = 6,039$, and $6,045 - 6,039 = 6$, so $6,045 \div 9 = 671$ R 6 .
9. **Exit Ticket:** A. 147 — $16 \times 147 = 2,352$. Check: $16 \times 100 = 1,600$, $16 \times 40 = 640$, $16 \times 7 = 112$. $1,600 + 640 + 112 = 2,352$.
