Date: Today's date

Class: Class period

EVIDENCE LAB MISSION

The Fraction Vault

You are the lead forensic analyst at the Reyes Detective Agency. A 3-foot strip of evidence tape must be cut into exact $\frac{1}{4}$ -foot sections before it can be logged — and the vault that holds the case file only opens once you know how many pieces that makes. Interpret fraction division and crack the case.

TODAY'S OBJECTIVES

Content Objective: I can use models to interpret what it means to divide by a fraction.

Language Objective: I can explain a fraction division using the words dividend, divisor, quotient, reciprocal, and unit fraction.

See **Learn It** for the explanation and worked examples, and the **Vocab** tab for the words. These are your notes to fill in and keep.

Fill in each blank as we go. Use the Word Bank to help you.

WORD BANK — FILL EACH BLANK WITH THE BEST WORD

Dividend

Divisor

Quotient

Reciprocal

Unit fraction

Tap any word to see what it means and a picture.

Level 3: try the blanks from memory first, then check the bank.

1

In $6 \div 1/2$, the number 6 being divided is the .

2

In $6 \div 1/2$, the number $1/2$ we divide by is the .

3

The answer to a division problem is the .

4

The fraction you get by flipping the numerator and denominator is the .

5

A fraction with a numerator of 1, like $1/5$, is a .

Reflect — Exit Ticket

What does $5 \div \frac{1}{4}$ mean, and what is the quotient?

- A. How many $\frac{1}{4}$ -size pieces fit into 5; quotient is 20
- B. 5 groups of $\frac{1}{4}$; quotient is $\frac{5}{4}$
- C. $\frac{1}{4}$ of 5; quotient is $\frac{5}{4}$
- D. 5 minus $\frac{1}{4}$; quotient is $4 \frac{3}{4}$

Your answer:

Answer Key & Teacher Guide

1. **Notes 1:** Dividend
2. **Notes 2:** Divisor
3. **Notes 3:** Quotient
4. **Notes 4:** Reciprocal
5. **Notes 5:** Unit fraction
6. **Watch for this mistake:** *A common mistake in Interpret Division of Fractions is skipping the key idea: "Dividing by a fraction smaller than 1 gives an answer BIGGER than what you started with, because many tiny pieces fit inside." — always check your work against this rule before you submit.*
7. **Try It 1:** A. $8 \div \frac{1}{4} = 32$ sections — *Each foot holds 4 fourths, so 8 feet hold $8 \times 4 = 32$ sections. The matching expression is $8 \div \frac{1}{4} = 32$.*
8. **Try It 2:** A. The number of $\frac{1}{3}$ -quart beakers she can fill, which is 15 — $5 \div \frac{1}{3}$ asks how many $\frac{1}{3}$ -quart beakers fit into 5 quarts. Each quart holds 3 thirds, so $5 \times 3 = 15$ beakers.
9. **Exit Ticket:** A. How many $\frac{1}{4}$ -size pieces fit into 5; quotient is 20 — $5 \div \frac{1}{4}$ means 'how many $\frac{1}{4}$ -size pieces fit into 5.' Since each whole has 4 fourths, $5 \times 4 = 20$.
