# Interpret Division of Fractions

Flagship

Lesson 2-1-flagship · Teacher Copy

**Name:** \_\_\_\_\_

**Date:** \_\_\_\_\_

**Class:** \_\_\_\_\_

## EVIDENCE LAB MISSION

### **The Fraction Vault**

You are the lead forensic analyst at the Reyes Detective Agency. A 3-foot strip of evidence tape must be cut into exact  $\frac{1}{4}$ -foot sections before it can be logged — and the vault that holds the case file only opens once you know how many pieces that makes. Interpret fraction division and crack the case.

## TODAY'S OBJECTIVES

**Content Objective:** I can use models to interpret what it means to divide by a fraction.

**Language Objective:** I can explain a fraction division using the words dividend, divisor, quotient, reciprocal, and unit fraction.

See **Learn It** for the explanation and worked examples, and the **Vocab** tab for the words. These are your notes to fill in and keep.

Fill in each blank as we go. Use the Word Bank to help you.

## WORD BANK — FILL EACH BLANK WITH THE BEST WORD

Dividend

Divisor

Quotient

Reciprocal

Unit fraction

Tap any word to see what it means and a picture.

1 In  $6 \div 1/2$ , the number 6 being divided is the .

2 In  $6 \div 1/2$ , the number  $1/2$  we divide by is the .

3 The answer to a division problem is the .

4 The fraction you get by flipping the numerator and denominator is the

.

5 A fraction with a numerator of 1, like  $1/5$ , is a .

## Reflect — Exit Ticket

**What does  $5 \div \frac{1}{4}$  mean, and what is the quotient?**

- A. How many  $\frac{1}{4}$ -size pieces fit into 5; quotient is 20
- B. 5 groups of  $\frac{1}{4}$ ; quotient is  $\frac{5}{4}$
- C.  $\frac{1}{4}$  of 5; quotient is  $\frac{5}{4}$
- D. 5 minus  $\frac{1}{4}$ ; quotient is  $4 \frac{3}{4}$

Your answer:

---

---

---

---

---

## Answer Key & Teacher Guide

1. **Notes 1:** Dividend
2. **Notes 2:** Divisor
3. **Notes 3:** Quotient
4. **Notes 4:** Reciprocal
5. **Notes 5:** Unit fraction
6. **Watch for this mistake:** *A common mistake in Interpret Division of Fractions is skipping the key idea: "Dividing by a fraction smaller than 1 gives an answer BIGGER than what you started with, because many tiny pieces fit inside." — always check your work against this rule before you submit.*
7. **Try It 1:** A.  $8 \div \frac{1}{4} = 32$  sections — *Each foot holds 4 fourths, so 8 feet hold  $8 \times 4 = 32$  sections. The matching expression is  $8 \div \frac{1}{4} = 32$ .*
8. **Try It 2:** A. The number of  $\frac{1}{3}$ -quart beakers she can fill, which is 15 —  $5 \div \frac{1}{3}$  asks how many  $\frac{1}{3}$ -quart beakers fit into 5 quarts. Each quart holds 3 thirds, so  $5 \times 3 = 15$  beakers.
9. **Exit Ticket:** A. How many  $\frac{1}{4}$ -size pieces fit into 5; quotient is 20 —  $5 \div \frac{1}{4}$  means 'how many  $\frac{1}{4}$ -size pieces fit into 5.' Since each whole has 4 fourths,  $5 \times 4 = 20$ .
