UNIT 2 • STANDARD 6.NOS.1

Interpret Division of Fractions

Lesson 2-1 • Teacher Copy

Name: Type your name

Date: Today's date

Class: Class period

TODAY'S OBJECTIVES

Content Objective: I can use models to interpret what it means to divide by a fraction.

Language Objective: I can explain a fraction division using the words dividend, divisor, quotient, reciprocal, and unit fraction.

See **Learn It** for the explanation and worked examples, and the **Vocab** tab for the words. These are your notes to fill in and keep.

Fill in each blank as we go. Use the Word Bank to help you.

WORD BANK — FILL EACH BLANK WITH THE BEST WORD

Dividend

Divisor

Quotient

Reciprocal

Unit fraction

Tap any word to see what it means and a picture.

1 In $6 \div 1/2$, the number 6 being divided is the .

2 In $6 \div 1/2$, the number $1/2$ we divide by is the .

3 The answer to a division problem is the .

4 The fraction you get by flipping the numerator and denominator is the

.

5 A fraction with a numerator of 1, like $1/5$, is a .

Reflect — Exit Ticket

What does $5 \div \frac{1}{4}$ mean, and what is the quotient?

- A. How many $\frac{1}{4}$ -size pieces fit into 5; quotient is 20
- B. 5 groups of $\frac{1}{4}$; quotient is $\frac{5}{4}$
- C. $\frac{1}{4}$ of 5; quotient is $\frac{5}{4}$
- D. 5 minus $\frac{1}{4}$; quotient is $4 \frac{3}{4}$

Your answer:

Answer Key & Teacher Guide

1. **Notes 1:** Dividend
2. **Notes 2:** Divisor
3. **Notes 3:** Quotient
4. **Notes 4:** Reciprocal
5. **Notes 5:** Unit fraction
6. **Watch for this mistake:** *A common mistake in Interpret Division of Fractions is skipping the key idea: "Dividing by a fraction smaller than 1 gives an answer BIGGER than what you started with, because many tiny pieces fit inside." — always check your work against this rule before you submit.*
7. **Try It 1:** A. How many $\frac{1}{3}$ -foot pieces fit into 8 feet — *Dividing by $\frac{1}{3}$ asks how many $\frac{1}{3}$ -foot pieces fit into 8 feet. Each foot holds 3 thirds, so $8 \times 3 = 24$ pieces.*
8. **Try It 2:** A. $5 \div \frac{1}{6} = 30$ slivers — *How many $\frac{1}{6}$ -inch slivers fit into 5 inches? Each inch holds 6 sixths, so $5 \times 6 = 30$ slivers.*
9. **Exit Ticket:** A. How many $\frac{1}{4}$ -size pieces fit into 5; quotient is 20 — *$5 \div \frac{1}{4}$ means 'how many $\frac{1}{4}$ -size pieces fit into 5.' Since each whole has 4 fourths, $5 \times 4 = 20$.*
