UNIT 3 · STANDARD 6.AT.3

Use Ratio Reasoning

Lesson 3-6 · Teacher Copy

Name: Type your name **Date:** Today's date **Class:** Class period

TODAY'S OBJECTIVES

Content Objective: I can use ratio reasoning to solve problems with proportions and scaling.

Language Objective: I can explain my reasoning using the words proportion, scale, equivalent, and unit rate.

See **Learn It** for the explanation and worked examples, and the **Vocab** tab for the words. These are your notes to fill in and keep.

Fill in each blank as we go. Use the Word Bank to help you.

WORD BANK — FILL EACH BLANK WITH THE BEST WORD

Proportion

Cross-multiply

Scale

Equivalent

Unit rate

Tap any word to see what it means and a picture.

1 An equation that states two ratios are equal is a .

2 Multiplying the numerator of one ratio by the denominator of the other to check a proportion is to .

3 To multiply a ratio up or down by the same factor is to it.

4 Two ratios that show the same comparison are .

5 The amount for exactly one unit is the .

Reflect — Exit Ticket

A recipe calls for 6 cups of flour for every 15 cookies. How many cups of flour are needed to make 45 cookies?

- A. 18
- B. 12
- C. 24
- D. 21

Your answer:

Answer Key & Teacher Guide

1. **Notes 1:** Proportion
2. **Notes 2:** Cross-multiply
3. **Notes 3:** Scale
4. **Notes 4:** Equivalent
5. **Notes 5:** Unit rate
6. **Watch for this mistake:** *A common mistake in Use Ratio Reasoning is skipping the key idea: "Find the scale factor, then multiply both parts; cross-multiply to check a proportion." — always check your work against this rule before you submit.*
7. **Try It 1:** A. 12 cups — *Scale factor: 18 servings divided by 6 servings = 3. Multiply the tomatoes by 3: $4 \times 3 = 12$ cups.*
8. **Try It 2:** A. 12 dishes — *Scale factor: 20 minutes divided by 5 minutes = 4. Multiply the dishes by 4: $3 \times 4 = 12$ dishes.*
9. **Exit Ticket:** A. 18 — *Scale factor: $45 \div 15 = 3$. Multiply flour by 3: $6 \times 3 = 18$ cups of flour.*
