Ratio

Better Buy

Divide

Tap any word to see what it means and a picture.

1 A ratio that compares two quantities with different units is a .

2 A rate that tells the cost or amount for one unit is a .

3 The word that means 'for each one' is .

4 A comparison of two quantities is a .

5 The option with the lower unit rate, costing less per item, is the .

6 To find a unit rate, I the price by the number of units.

Reflect — Exit Ticket

A store sells 6 pencils for \$1.50 and 10 pencils for \$2.80. Which is the better buy?

- A. 6 for \$1.50 — \$0.25 each
- B. 10 for \$2.80 — \$0.28 each
- C. They cost the same per pencil
- D. Not enough information

Your answer:

Answer Key & Teacher Guide

1. **Notes 1:** Rate
2. **Notes 2:** Unit Rate
3. **Notes 3:** Per
4. **Notes 4:** Ratio
5. **Notes 5:** Better Buy
6. **Notes 6:** Divide
7. **Watch for this mistake:** *A common mistake in Rates and Unit Rates is skipping the key idea: "To find a unit rate, divide the total cost by the number of items. The lower cost per item is the better buy." — always check your work against this rule before you submit.*
8. **Try It 1:** A. Pulse, at 15 points per minute — Nova: $78 \div 6 = 13$ points per minute. Pulse: $75 \div 5 = 15$ points per minute. $15 > 13$, so Pulse is faster.
9. **Try It 2:** A. Machine B, at 21 coins per play — Machine A: $150 \div 5 = 30$ coins per play. Machine B: $168 \div 8 = 21$ coins per play. $21 < 30$, so Machine B is the better value.
10. **Exit Ticket:** A. 6 for \$1.50 — \$0.25 each — $\$1.50 \div 6 = \0.25 per pencil. $\$2.80 \div 10 = \0.28 per pencil. $\$0.25 < \0.28 , so 6 for \$1.50 is the better buy.
